

announcing

an

ALL NEW steering system

Because of the severe space limitations of the Avro "Arrow", Jarry Hydraulics were called upon to design an entirely new type of steering system. This system*, fully developed by our engineers, is now available for aircraft of all sizes.

advantages offered:

1. One cylinder and control valve
2. Full steering to $\pm 60^\circ$
3. Automatic shimmy damping
4. Quick disconnect for 360° towing
5. Considerable space and weight saving
6. Fully qualified to MIL specs.

The Jarry steering system, operating through the torque arms, can offer you these advantages as well. Why not write for further particulars?

*Fully patented in Canada, U.S.A. and U.K.
