

In Defence of the Realm

NUMBER 2 IN A SERIES

There's no question about it. Tomorrow's aircraft will be Deltas. And it's not a revolution. It's an evolution in design. The normal, orderly process of development which strides from today into tomorrow. Given immense jet power — the design, the shape, the planform of future aircraft naturally becomes a Delta. Here is the answer for long range, high altitude, high speed aircraft with a heavy payload. Pioneer in Deltas is A. V. Roe of Manchester. Their successful research and flight testing programmes with the 707 A and B have captured the imagination of the world. They have proved, among other things which unfortunately must be secret, that the Delta handles like any other good aeroplane, easy to fly, easy to land. A. V. Roe is a member company of the Hawker Siddeley Group, that industrial commonwealth of companies, largest of its kind, whose resources are pledged to building the prosperity and defensive strength of the Free World.
