

CF-100 WITH ICEGUARDS

ON DELIVERY TO R.C.A.F.

**NEW
"HOT RUBBER" ICEGUARDS
PROTECT CF-100 FROM ICE**

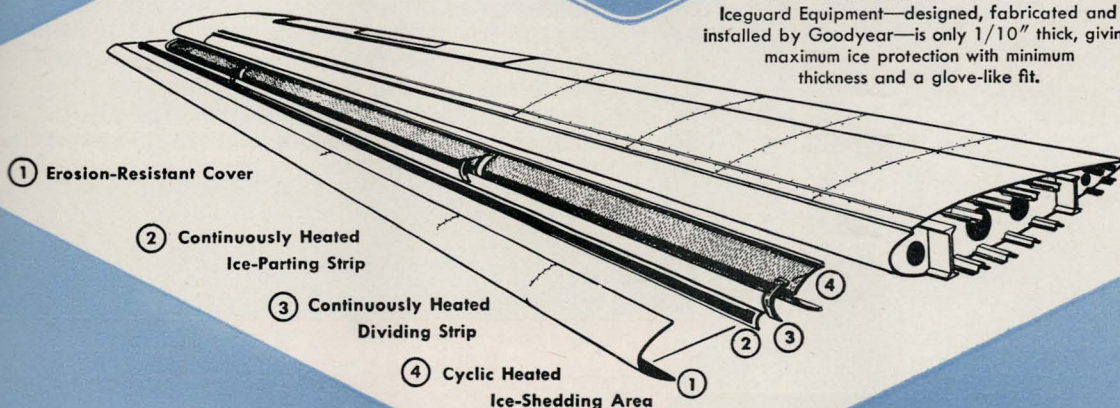

The R.C.A.F.'s CF-100 Long Range Fighter will be protected against icing, up to operational heights with Goodyear Iceguard Equipment.

The Iceguard uses the principle of electro-thermal de-icing originated and developed by The National Research Council of Canada. Resistance wire elements, moulded into a special erosion-resistant synthetic rubber compound, generate heat for de-icing. For further details, write

Aviation Products Division, Goodyear, New Toronto, Ontario.

On the AVRO Canada-built CF-100 the Iceguard Equipment—designed, fabricated and installed by Goodyear—is only 1/10" thick, giving maximum ice protection with minimum thickness and a glove-like fit.

MORE AIRCRAFT LAND ON GOODYEAR

TIRES THAN ON ANY OTHER KIND
