

objective: freedom

CF100's, flown by operational pilots of the R.C.A.F., singly and in formation, are now probing the sky on familiarization and training flights over Northern Ontario. Its element the thin cold air of the sub-stratosphere, its role the far-flung defence of Canada's Arctic border, the CF100, powered with two ORENDAS, packs performance and punch specifically directed at keeping and maintaining Canada's freedom.

Now in quantity production at AVRO Canada's new gas turbine plant, ORENDAS installed in the CF100 are the most powerful jet engines in production today. In 1953 ORENDAS jet engines will also be installed in all F-86 Sabres for improved performance. Eventually all R.C.A.F. first line fighter aircraft will be ORENDAS-powered as Canada's new JETPOWERED aviation industry becomes completely self-sufficient.
