

SAFE-T-FLOTES: Ontario's Department of Lands & Forests has taken delivery of its first unsinkable aircraft anchorage for use at Moosonee. Able to handle an Otter seaplane, this is the first such application of the unsinkable "Safe-T-Flote" plastic foam-filled floats which were developed and manufactured by Taylor-Leslie Mining & Engineering Corp. Ltd. of Toronto. Floats are light and easily assembled into docks.

final approach is completed, preferably within 5 miles of the threshold of the runway in use."

Allegheny to Buy 540?

According to an American news source, Allegheny Airlines is planning to purchase the Canadair 540 which it has been operating under a leasing arrangement since July 1959. The airline recently announced plans to buy 11 Convair 240-340 aircraft for conversion to Napier Eland power. Four of these 11 are scheduled to be converted to Eland power by Canadair Ltd.

Vancouver Airport Authority

Alderman Halford Wilson, chairman of the Vancouver airport board, says the B.C. cabinet has approved proposals by the city to form an airport authority under which it could finance a new airport passenger terminal on a self-liquidating basis.

CPA-TCA DC-8 Agreement

CPA's decision to purchase four DC-8's was made only after an agreement had been reached with TCA for a joint servicing arrangement for the luxury jetliner equipment. By operating the same kind of aircraft, with essentially the same Rolls-Royce Conway engines, both carriers stand to save money on maintenance costs. It is understood that overhaul of CPA's

jet engines will be done at the TCA maintenance facilities at Montreal.

It had been widely thought that CPA was about to purchase Boeing 707's when the surprise agreement was reached with TCA. Another major saving for CPA lies in the fact that CPA crews can use TCA's DC-8 flight simulator for training purposes.

1958 Accident Record

The DoT's Civil Aviation Branch recently published its annual report on aircraft accidents in Canada for the year 1958. The report is an analysis of accidents for this period, and shows the trend in the causes of accidents for the years 1952 to 1958 inclusive.

In 1958 there were 355 accidents reported involving Canadian registered aircraft engaged in civil flying. This figure excludes minor accidents in which there were no injuries.

There was a decrease of about 6.2% in the total number of commercial hours flown and a decrease of 2.7% in the ratio of accidents to the number of commercial aircraft registered. In addition the number of aircraft registered in the commercial category increased by 2.9% in 1958.

Compared with the total number of aircraft registered in the private category, there was an increase of 1.8% in the number of accidents. The number of aircraft registered in the private category increased by 21.7% and the

number of private pilots' licences in force increased by 20.7%.

In 1958 the number of accidents attributed to personnel error is 76.9%, an increase of 3.9% over the year previous. Material failures in general show a decrease of 5.6%; accidents due to weather show an increase of 0.3% and the number of accidents in which the cause was undetermined increase by 1.5%.

New Electra Service

Turboprop Lockheed Electras were introduced to American Airlines' New York to Toronto route January 17. The Electra will trim the flying time between the two cities to one hour and twenty-four minutes. According to American, this is 20% faster than any commercial air service now offered between the two cities. Initially, the company intends to provide three daily non-stop trips in each direction. In February, three additional Electra trips will be offered.

TCA Opposes Age Limit

According to President G. R. Mc-Gregor, TCA does not agree with the recent U.S. FAA ruling on an age limit of 60 for airline pilots. Said Mr. McGregor: "The more experience they have, the better we like it."

He was referring to the recent FAA announcement in the U.S. that as of March 15, 1960, pilots over 60 years of age would not be allowed to fly for U.S. airlines. Explanation offered by the FAA for the new rule was that it is necessary to assure the highest degree of safety in an era when jet airliners carry up to 165 passengers at speeds up to 600 mph.

Dissenting with this stand, Mr. McGregor stated: "We give our pilots a stiff medical examination twice a year. As long as they pass that we want them to continue to fly." He added the observation that the newer aircraft have improved cockpit layouts that actually make them easier to fly.

Jetliners the Greatest

R. E. Johnson, senior vice-president of United Air Lines, has described the jetliner as the greatest single advance in the history of airline travel.

He told a Vancouver service club that aviation authorities have estimated U.S. airlines will be carrying 100,000,- 000 passengers a year by 1965. They now are carrying 50,000,000.

American carriers have invested more than \$2 billion in the future of jet air travel. But this will require at least 10 years for amortization before serious thought can be given to the tremendous costs involved in developing and operating an airline system using supersonic aircraft.

North American cities must bring their airports up to jet standards if they are to cash in on the future. This means new concepts in rapid handling of passengers and baggage, as well as new concepts of handling jet aircraft.

He said United Air Lines will introduce jets to Vancouver next summer using Boeing 720's.

Equip your plane with

New! MANUALLY ACTUATED FEDERAL Cinglide SKI GIVES MULTI-PURPOSE ADVANTAGES AT AN ECONOMY PRICE

For the pilot operating in snow country for an extended period of time, Federal Airglide skis without hydraulic actuation is the practical answer for the man who wants quality performance at a low price. You get the same tire cushioned ride and the same quality construction except you actuate the skis to the ski or wheel position while the plane is on the ground.

WITH HYDRAULIC ACTUATION . . .

The Federal Airglide skis are raised or lowered by a single control in the cockpit, giving the pilot his choice of either wheels or skis at all times.

WHEEL REPLACEMENT SKIS ...

The ever popular (and still lower cost) Federal wheel replacement ski is designed for the pilot whose operations may not require the Airglide features.
