## ARROW 4 COMMENTS

- 1. The APROW 4 could very well serve as a high altitude firing platform for specialized missiles.
- 2. An APROW 4 equipped with ducted rockets could serve as a short radius high altitude high performance interceptor featuring an unusually high rate of climb and a consequent reduction of the scramble to kill time.
- 3. The APROW 4 is an extremely flexible aeroplane. This is shown by the variety of mission profiles it can fulfill.
