THE ENGINE PORTER

The engine porter supports the engine by the crankshaft allowing the engine to be rotated for easy working during buildup. Suitable adapter collets allow various engine sizes to be fitted alternately on the same stand. Two models are available to cover all weights and ranges of engines.

THE TILT-ARC ENGINE SLING

The Tilt-Arc engine sling allows you to roll any radial engine from "Shaft Vertical" position to "In-Flight" position while suspended. It will accommodate any size or type of radial engine within the weight limits of the sling.

An R-1380 Engine being rolled into "In-Flight" position.
