

Where Titeflex service begins...

It starts with a heavy investment in skilled people and precision equipment—seasoned by wide experience in metal hose development for aviation—sparked by an intimate knowledge of its performance and possibilities.

We try to give total service by taking over wiring, fuel line and ignition problems for customers while their new engines are little more than a gleam in the designer's eye. We do this by living with their specifications until we produce the exact *failure-free* metal hose needed... light weight, space-saving, built to take extremes of pressure, temperature, vibration, corrosion, in today's engines.

In addition, we're continually working on new metal hose designs to meet the needs of tomorrow's higher powered jets, rockets and guided missiles. If you're wrestling with connection problems, consider using Titeflex.

Titeflex

FLEXIBLE METAL HOSE

Titeflex, Inc.

Aviation Products Division
519 Frelinghuysen Avenue
Newark 5, New Jersey
