

An ORENDAs powered SABRE built by Canadair and flown by Miss Jacqueline Cochran recently established five world's records including the 100 Kilometer record at 652.37 M.P.H. and the 15 Kilometer record at 670 M.P.H.

tribute to teamwork

Two years of constant association on the top-priority project of perfecting the ORENDAs-SABRE for the R.C.A.F. has fostered teamwork of a high order between Canadair and AVRO Canada.

Installation of the ORENDAs in SABRES for the R.C.A.F. being built at Canadair is now underway. This successful combination of two Canadian Jet Age products makes the ORENDAs-SABRE the world's outstanding fighter aircraft in volume production.

Canadair's capacity to produce this new SABRE, one of which flew from Toronto to Montreal in 28 minutes, is assured through regular delivery of ORENDAs from AVRO Canada's Gas Turbine Division.

ORENDAs output is now sufficient to power all production of SABRES and CF100's, as well as spares for the R.C.A.F. and NATO bases.
