

The Elizabethan touch

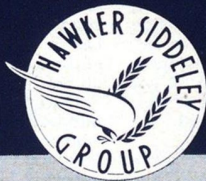

AT 600 PLUS

Four centuries ago the courageous men of Britain, inspired by their queen, fared forth in gallant ships to explore, discover and assume the mastery of the seas. Today, descendants of those pioneers of global travel, probe the sonic barrier and the stratosphere in sleek and powerful ships of the air. They, too, are inspired by the constant interest and gracious example of another Queen Elizabeth.

Pioneers in the air with a record of leadership unparalleled in this Jet Age, the Hawker Siddeley Group is symbolic of that flair for exploration, discovery and advancement initiated in the Elizabethan Era.

That same spirit of adventure led the Group in 1945 to invest large sums to form AVRO Canada and occupy the site of the Victory Aircraft plant at Malton. Today over 14,000 AVRO workers are engaged in producing CF100's and ORENDA jet engines for the R.C.A.F. At the same time teams of enthusiastic researchers, designers and technicians explore, discover and develop new ways and methods to provide better, safer and surer flight concepts in defence of freedom.
