

The AVRO Jetliner — America's First Jet Transport

happier passengers...relaxed crews

THE MOST COMFORTABLE passenger seat ever designed becomes a fatiguing spot to sit in when the roar and vibration of piston engines saps energy and frays nerves. Only *Jetflight* in the AVRO Jetliner makes perfection.

Up front with the crew there's a restful quiet that keeps them fresh throughout the run when the machine is powered by the smooth thrust of jet engines.

The extra speed, safety and phenomenal

quiet of *Jetflight* will make all other forms of travel primitive. With greater carrying capacity, easier and faster maintenance, fewer spares needed and the prospect of more flying hours per day, the profit margin becomes a potential major aspect of Jetliner operation.

For more detailed consideration you will need Jetliner operational studies. AVRO Canada is prepared to submit these on request from interested airline operators.
