

A LONG STRAIGHT FURROW

Never since its formation has the Hawker Siddeley Group deviated from its original purpose—to produce the best. Never have small issues been allowed to cloud its conception of its duty to the British aircraft industry.

This free association of English and Canadian companies teamed together, provides a pool of technical experience, technique, resources and facilities which would be far beyond the scope of any individual firm. Each company manages its own affairs entirely, yet each has behind it the combined experience of all the other member-companies and can call upon the research and production of the entire Group.

In the recent war the Group produced such effective aircraft as the Ansons, Whitleys, Lancasters, Lincolns, Yorks; the Hurricanes, Tempests and Typhoons.

Now, in the new era, the Air Age, the Hawker Siddeley Group has again set the pace with the huge Avro Tudor transports, the Gloster Meteor, the Armstrong Whitworth Flying Wing and the Armstrong Siddeley Mamba and Python axial flow prop-jet engines.

With these and other projects now in development will the Hawker Siddeley Group continue to set the pattern of planes to come.
