MB-1 Rocket Installation - Arrow Aircraft
Transmission of Drawings and Reports

1 An armament pack and ejection system capable of carrying and launching MB-1 rockets is currently being designed by AVRO for the Arrow aircraft. As much of the information urgently required to assist in the design and development of this installation is available at Douglas Aircraft Co., it is essential that an official channel be established as soon as possible between these companies for the transmission of the drawings and reports required.

2 The documents required by AVRO for this project would be requested and transmitted through the accredited RCAF representatives associated with the respective companies, i.e. 771 S/L R.E. Young (AVRO) and 2201 S/L W.E. Tuller and 22135 F/O T.E. Kendall (Douglas). It is to be noted that this channel is for the transmission of normal classified documents only and not for the transmission of documents involving Restricted Data.

3 It is requested, therefore, that the approval of appropriate US authorities be obtained for:

- (a) the establishment of this channel
- (b) the extension of the accreditations of S/L Tuller and F/O Kendall at Douglas Aircraft Co., Santa Monica, Calif., to include the MB-1 rocket and associated aircraft installations.
