

# *1000 delivered ... more on the way*

One of the most decisive factors in Canada's new aeronautical strength is the steady flow of Orenda jet engines from the Gas Turbine Division of AVRO Canada at Malton.

Now well on the way to its second thousand Orendas, the new AVRO Canada engine plant, not yet two years old, is supplying all the power plants for AVRO Canada's own CF-100 and the Canadair Sabre 5. Few jet engines hold the distinction of powering two such outstanding military aircraft already in squadron service.

The Orenda, like the CF-100, is a notable all-Canadian achievement, being a product of AVRO Canada's design and engineering staff. As the Orenda is developed to deliver still greater power, these engineering teams are also busy on other jetpowered projects for the future.

*For original Canadian design ...  
PLUS efficient production ...  
look to AVRO Canada.*
