POWER PORT

This unusual angle shot of the deHavilland Vampire puts the emphasis on the business end of the power plant. Here's the first of Canada's 85 jet-propelled fighters being readied for testing at the Downsview plant of de Havilland. This machine and several others are now in service with the RCAF, with squadrons across Canada to be equipped with these 500-mph craft within the next few months. (Aircraft and Airport Photo)
