COUNTIES, PRINCIPAL CITIES AND RIVERS

AGRICULTURE—MARYLAND

INTRODUCTION

The results obtained by the enumeration of the farms, livestock on farms, and the acreage and quantity of the specified crops harvested, in the 1935 Census of Agriculture, are presented in this bulletin. Figures are presented by counties for the following items: Farms, classified by color and by tenure of operator; farm acreage, classified by color and by tenure of operator, and according to use; farm value, classified by color and by tenure of operator; the number of the principal classes of livestock; and the acreage and quantity of the specified crops harvested.

The table for the State presents the figures for farms, farm acreage, and farm value; for the number and the value of the principal classes of livestock on farms; and for the acreage, quantity, and value of the specified crops harvested.

The same general method of enumeration was employed for the 1935 Census of Agriculture as heretofore. The figures are, therefore, the results obtained from tabulation of information given by farm operators to the Census enumerators in a personal canvass of the individual farms in the United States.

Census dates.—The statistics presented for the Census of 1935, relate to inventory items of January 1, 1935, while the production items are for the calendar year 1934. Comparative data from the Census of 1930 are given for many of the items, inventory items being for April 1 of that year and the production items for the calendar year 1929.

The influence of the severe drought in 1934 and of the economic conditions existing when the 1935 Census of Agriculture was taken on the use of land, the number of livestock on farms, the kind of crops grown and the quantity harvested, and on the utilization of crops, should be considered when comparing the statistics obtained in the Census of 1935 with those of previous censuses.

EXPLANATION OF TERMS USED IN THIS BULLETIN

Farm.—A “farm”, for census purposes, is all the land which is directly farmed by one person, either by his own labor alone or with the assistance of members of his household, or hired employees. A ranch, nursery, greenhouse, hatchery, feed lot, or apiary, is considered a farm. Establishments keeping fur-bearing animals or game, fish hatcheries, stockyards, parks, etc., are not considered as farms, unless combined with farm operations.

The enumerator was instructed *not* to report as a farm any tract of land of less than 3 acres, unless its agricultural products in 1934 were valued at \$250 or more.

A farm may consist of a single tract of land, or of a number of separate tracts. These several tracts may be held under different tenures, as when one tract is owned by the farmer and another tract is rented by him. When a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a farm. Thus on a plantation the land operated by each “cropper” or tenant was reported as a separate farm. The land operated by the owner or manager, by means of wage hands, was likewise reported as a separate farm.

Farm operator.—A “farm operator”, according to the census definition, is a person who operates a farm, either performing the labor himself, or directly supervising it. Therefore, the number of farm operators is identical with the number of farms.

Farms reporting.—The term “farms reporting,” as used in the tables, indicates the farms for which the specified items shown in the particular table were reported. The number of farms reporting any item is for all practical purposes equivalent to the number of farms having such item. For example, if there were 900 farms in a county and only 640 of these had swine on hand on January 1, 1935, then the number of “farms reporting swine” would be 640.

Color of farm operator.—Farm operators are classified as “white” or “colored”. White includes Mexicans and Hindus; and colored includes Negroes, Indians, Chinese, Japanese, and other nonwhite races, and also mixtures of white and colored races.

Tenure.—Farm operators are classified into three general classes according to the tenure under which they operate their farms, as follows:

1. **Owners** own all or part of the land which they operate. Separate figures are shown for two types of owners, namely, full owners and part owners. Full owners own all of the land they operate. Part owners own a part and rent from others the rest of the land they operate.

2. **Managers** operate farms for others and receive wages or salaries for their services. Persons acting merely as caretakers or hired as laborers are not classified as managers.

3. **Tenants.**—Figures for the Southern States cover two classes of tenants—croppers and other tenants. Croppers are defined as share tenants, the principal distinguishing feature of the tenure being that the work animals are furnished by the landlord. Other tenants comprise all those who rent under other conditions or types of agreement.

Land in farms.—The acreage designated as "all land in farms" includes considerable areas of land not actually under cultivation, and some not even used for pasture or grazing, since each farm operator was asked to report as a unit all the land he considered a part of his farm, but not to include isolated tracts of timberland or other areas not connected with his farm.

Figures for the following eight classes of land based upon the use made of the land in 1934 are given:

1. Crop land harvested, comprises land from which cultivated crops were harvested, land from which hay (including wild hay) was cut, and land in small fruits, orchards, vineyards, nurseries, and greenhouses. Where two or more crops were harvested in 1934 from the same acreage, such acreage was included only once in the acreage for crop land harvested. However, the acreage and the quantity of the individual crops were reported separately as crops harvested. Thus, in some counties the total of the acreage of crops may greatly exceed the acreage designated as crop land harvested.

2. Crop failure.—The land from which no crop was harvested in 1934 because of destruction by wind, hail, drought, floods, insects, disease, or from any cause, or failure to harvest because of low prices or lack of labor is given under crop failure. If a crop was harvested, even though the yield was very low, the land from which the crop was actually harvested was included in the acreage designated as crop land harvested rather than in the acreage designated as crop failure. The acreage designated as crop failure does not represent the entire acreage of crops which failed, but only that acreage of land in crops that failed and which was not successfully replanted to a crop that was harvested in 1934.

3. Idle or fallow land, comprises crop land, which was lying idle or which was in cultivated summer fallow, or land on which crops were planted for soil improvement or the prevention of erosion, and which was not pastured, or from which no crop of any kind was harvested in 1934.

4. Plowable pasture, comprises land used *only for pasture* in 1934 which could have been used for crops without clearing, draining, or irrigating. (Land from which a crop was harvested in 1934 but which was later used for pasture was included under crop land harvested rather than under pasture land.)

5. Woodland pasture, comprises woodland *used for pasture* in 1934. Woodland is land occupied by trees, or young growth which will have a value as wood or timber, and includes all farm wood lots or timber tracts, natural or planted, and cut-over land with young growth, but excludes chaparral and woody shrubs.

6. Other pasture, comprises all land used *only for pasture* in 1934, which was not included in plowable pasture or woodland pasture.

7. Woodland not used for pasture, comprises the woodland, included in the farm acreage in 1935, which was *not used* for pasture in 1934.

8. All other land in farms, comprises rough, swampy, or waste land not in woodland, pasture, or crops; also land occupied by buildings, barnyards, feed lots, roads, fences, ditches, etc.

Farm value.—The enumerators were instructed to obtain from each farm operator the total value of the farm (land and buildings) operated by him. The total value of farm land and buildings was to be reported as the market value, or the amount for which the farm would sell. Part owners were to include the value of the land and buildings rented from others.

Number of livestock.—The 1935 Census of Agriculture was taken as of January 1, while the 1930

Census was taken as of April 1. Hence, the numbers of the various classes of livestock returned for these two census years are not fully comparable. A number of animals on a farm on January 1 of a year might die, be sold, or slaughtered before April 1. On the other hand, a number of animals may be born, or brought to farms between January 1 and April 1. In order to make the statistics for horses, mules, and cattle for 1930 and 1910 more nearly comparable with those for 1935, 1925, and 1920, the number of animals under 3 months of age on April 1, 1930, and on April 15, 1910, has been excluded from the comparative figures shown in this report for 1930 and 1910.

Acreage and quantity of crops harvested.—The acreage and quantity of all crops harvested, secured in the Census of 1935, are for the calendar year 1934. The acreage shown for the several crops represents the acreage harvested, which is often less than the acreage planted.

Statistics for fruits, vegetables, and the various annual legumes, enumerated at this census are not included in this bulletin, but will be published later.

Corn.—The 1935 farm schedule contained two inquiries relative to corn. One called for the total acreage of corn for all purposes, and the other for the acreage and quantity harvested for grain. The acreage of corn for all other purposes (silage, fodder, grazing, or hogging off) was secured by subtracting the acreage of corn for grain from the acreage of corn for all purposes.

Oats.—The acreage and quantity of oats cut for grain and threshed do not represent the total acreage or total quantity of oats harvested. In addition to the inquiry for oats cut for grain and threshed, the farm schedule contained two other inquiries under which oats were reported. One of these inquiries called for the acreage of oats cut for grain when ripe or nearly ripe and fed unthreshed, and the other inquiry called for the acreage and quantity of small grains cut for hay. Hence, the acreage and quantity of oats cut for hay were included with small grains cut for hay.

Values of specified crops and livestock.—The values shown in the State table were obtained by multiplying the number of units of crops harvested in 1934 or the number of each class of livestock on hand January 1, 1935, by the average unit value for the State. These unit values were calculated, cooperatively, by the Bureau of the Census of the Department of Commerce, and the Bureau of Agricultural Economics of the Department of Agriculture. These unit values were based upon the average prices received by farmers, as reported by regular price correspondents of the Bureau of Agricultural Economics.

STATE TABLE.—FARMS, FARM ACREAGE AND VALUE, AND PRINCIPAL CLASSES OF LIVESTOCK ON FARMS AND RANCHES WITH VALUE, 1935, 1930, 1925, 1920, AND 1910; AND FARM LAND ACCORDING TO USE, AND ACREAGE, QUANTITY, AND VALUE OF SPECIFIED CROPS HARVESTED, 1934, 1929, 1924, 1919, AND 1909
