MARYLAND

POPULATION—MARYLAND

COMPOSITION AND CHARACTERISTICS OF THE POPULATION

Introduction.—The total population of the State of Maryland in 1930 is given by counties and minor civil divisions and for cities and other incorporated places in the first series of Population Bulletins, already published, entitled "Number and Distribution of Inhabitants." In this second series the population is classified by sex, color, nativity, age, marital condition, etc., in more or less detail for all the political divisions or areas shown in the first series except incorporated places having less than 1,000 inhabitants and the wards of the smaller cities. The distinction between urban and rural population, and also that between rural-farm and rural-nonfarm, is carried through most of the classifications. Both bulletins were prepared under the supervision of Dr. Leon E. Truesdell, chief statistician for population.

Some additional items, in particular the classifications according to State of birth, mother tongue, year of immigration, ability to speak English, and detailed occupations, together with dwellings and families, tenure of home, and other family data, remain to be presented in later publications.

Urban and rural areas.—Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural.

Table 1 shows the population of the State in 1930 in various urban and rural groups, with separate figures for the farm population, and with comparative figures for earlier censuses.

TABLE 1.—POPULATION OF THE STATE, URBAN AND RURAL: 1890 TO 1930

Farm population.—The farm population as shown for 1930 comprises all persons living on farms, without regard to occupation. The farm population figures for 1920 include, in addition, those farm laborers (and their families) who, while not living on farms, nevertheless lived in strictly rural territory outside the limits of any city or other incorporated place. Though the number of additional persons thus included is believed not to have been very great, some allowance should be made for this difference in definition when comparing the figures. Further allowance should be made for the fact that the 1920 census was taken in January, when considerable numbers of

farm laborers and others usually living on farms were temporarily absent, while the 1930 census was taken in April, when by reason of the advancing season the number of persons on the farms was appreciably larger.

Farm population figures were obtained on the farm schedule in the Agricultural Census taken in January, 1925, but by reason of the different method of collecting the information and the different date, it is felt that these figures should not be presented for comparison with the 1930 returns without more analysis than it is possible to give them at this time.

In Table 1 the 1930 and 1920 farm population figures are presented in two subdivisions, urban-farm

and rural-farm, and the 1930 data are shown in the same way by counties in Table 13. The urban-farm population, which comprises persons living on farms situated within the limits of cities or other incorporated places having 2,500 inhabitants or over, is printed in *italics* in these tables, and the more detailed presentations in other tables are limited to the rural-farm population. In other words, the analysis of the farm population is limited to that part living in rural territory, which is designated in every case as "rural-farm." This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, rural-farm, and rural-nonfarm) and partly because it is felt that the few farm families resident within the corporate limits of cities or towns are living under conditions at least somewhat urban, rather than under typical farm conditions.

Color, nativity, and sex.—In Table 2 are presented the population statistics for the State for the last three censuses, with classification by color and sex for the entire population and by nativity and parentage for the white population. The white population is thus divided primarily into three groups: (1) Natives of native parentage—that is, having both parents born in the United States; (2) natives of foreign or mixed parentage—that is, having one or both parents born abroad; and (3) foreign born. In Table 2, and also in the tables for counties and the larger cities, the second group is divided into two parts, namely, (a) natives of foreign parentage—that is, having both parents born abroad, and (b) natives of mixed parentage—that is, having one parent native and the other foreign born. It has not been thought necessary to take space for the nativity and parentage classification of the nonwhite groups, since nearly all Negroes and Indians are natives of native parentage, and nearly all Chinese and Japanese are either foreign born or of foreign parentage. Persons of Mexican birth or parentage who were not definitely returned as white or Indian in 1930 are designated "Mexican" and included in the general class of "Other races." In prior censuses most Mexicans have been classified as white. Statistics of the population classified by color, nativity, and sex are presented by counties in Tables 13 and 14, and for cities and various smaller areas in Tables 15, 16, 21, 22, and 23.

Citizenship.—The foreign-born white population is distributed in Table 2 by citizenship. This classification comprises four groups: (1) Naturalized; (2) having first papers—that is, having made formal declaration of intention to become a citizen of the United States; (3) alien; (4) unknown—that is, with status as to citizenship not reported. Citizenship is also shown for foreign-born white persons 21 years of age and over in Table 4.

Age.—The age classification in the census returns is based on age at last birthday, that is, age in completed years. The age statistics are presented for the State in Table 3, for counties in Table 11, and for cities of 10,000 or more in Table 12. In these tables the age classification is presented not only for the total population but also for the more important population classes (native white, foreign-born white, Negro, etc.), by sex. The age classification of the total population also is given in the tables for the smaller incorporated places, for the election districts, and for the wards of Baltimore.

Table 4 shows the population 21 years of age and over classified by color, nativity, and sex, with data for the foreign-born white by citizenship.

Statistics for males of militia age (18 to 44 years) are presented by color and nativity in Table 5.

School attendance.—The school-attendance tabulation is based on the replies to the enumerator's inquiry as to whether the person had attended school or college of any kind since September 1, 1929. The State totals are presented in Table 6 for the principal population groups separated into significant age periods. School attendance is shown by counties in Table 13 and for cities of 10,000 or more in Table 15.

Illiteracy.—The census defines as illiterate any person 10 years of age or over who is unable to read and write. The classification is based on the answers given to the enumerator in response to the question "Whether able to read and write." No specific test of ability to read and write was prescribed, but the enumerators were instructed not to return the answer "Yes" (which would classify the person as literate) simply because a person was able to write his or her name. The statistics of illiteracy are presented for the State in Table 7 and for counties, cities, and towns in Tables 13, 14, 15, and 16.

Marital condition.—The classification as to marital condition—whether single, married, widowed, or divorced—is presented for the population 15 years of age and over by sex, color, and nativity, in Table 8 for the State as a whole, and by sex only in Tables 13, 14, 15, and 16 for counties, cities, and towns.

Foreign white stock by country of origin.—The foreign white stock, as defined by the Census Bureau, is composed of two distinct elements, the foreign-born white and the native white of foreign or mixed parentage. The foreign-born white are classified according to country of birth; the native white of foreign or mixed parentage are classified according to country of birth of father, except where the father is native and the mother foreign born, and then according to country of birth of mother. All classifications of the 1930 population according to country of birth, so far as they relate to European stock, are based on the present political boundaries of European countries. Comparative figures are presented for the foreign born only, because the 1920 figures for natives of foreign parentage were classified according to pre-war rather than postwar geography, with the result that for many countries the data are not comparable with those tabulated for 1930. In addition to the State summary presented in Table 9, statistics for the foreign-born white by country of birth are presented for counties and for cities of 10,000 or more in Table 18, and statistics for the native white of foreign or mixed parentage by country of birth of parents are presented in Table 19 for the same areas.

Gainful workers by industry groups.—In response to a widespread demand for some classification of the gainful workers by counties, a condensed tabulation has been made for presentation in this bulletin. This tabulation is summarized in Table 10, which shows the population 10 years of age and over engaged in gainful occupations classified into about 50 industrial groups. (Persons usually working at a gainful occupation but temporarily unemployed at the time of the census, are included in the number of gainful workers.) Because this classification was made largely for the

COMPOSITION AND CHARACTERISTICS

5

benefit of the rural counties, specific occupations in the agricultural group (farmers, farm laborers, etc.) are shown separately. The other classifications are strictly industry or service groups, with no attempt to show specific occupations. The figures are presented for males and females and also for white and Negro workers. Similar figures, though with a somewhat condensed list of industry groups, are presented by counties and for cities of 25,000 or more in Table 20. Table 10 shows the complete list of industry groups as

tabulated, without regard to their importance in this particular State. Small numbers of workers may be shown in this table for industries not carried on in the State, these representing persons who usually work in the specified industries elsewhere. In Table 20 the smaller groups have been consolidated and only the more important ones are shown by counties. The specific make-up of any of these consolidated groups can be found by referring to Table 10.

TABLE 2.—COLOR, NATIVITY, AND SEX, FOR THE STATE, URBAN AND RURAL: 1930, 1920, AND 1910
