

C. H. CURTISS & CO.

HARDWARE,

PLUMBING & TINNING.

STEAM, HOT WATER AND HOT AIR HEATING.

Tarrytown, N.Y. November 8., 1888

Mr. W. H. Mersereau,

Dear Sir:-

Mr. Irving notified us a few days since, that he was ready to have the test of the drains made any time, so yesterday we had them all exposed, just as they were before, and had the top part taken off a length of tile on each of the three drains, so he could see the water running through them. Then we tried all the fixtures in the house, in succession, and put a hose in each leader drain, so he could see for himself just what drains carried the waste from each fixture and leader. He expressed himself entirely satisfied with the test. I feel sure that his mind is at rest, so far as these drains are concerned, as he has now a personal knowledge of them.

Yours very truly,

C. H. Curtiss & Co.

Dear Sir:-

Mr. Irving notified us a few days since, that he was ready to have the test of the drains made any time, so yesterday we had them all exposed, just as they were before, and had the top part taken off a length of pipe on each of the three drains, so he could see the water running through them. Then we tried all the fixtures in the house, in succession, and put a hose in each leader drain, so he could see for himself just what drains carried the waste from each fixture and leader. He expressed himself entirely satisfied with the test. I feel sure that the work is at least, so far as these drains are concerned, as he has now a personal knowledge of them.

Yours very truly,
