

My dear Sir

Was on the point of writing
you when I received your note. - There are
several points on stable moved like to see
you about. - First the door. I think if
the first sketch had been adhered to as the
large door to carriage house, had been ready
cladding instead of servicing you would get
much better results. Doing as large as that
will never stay in order being on heights -
Will you kindly send word around here today
if you would consider the change? -
I also noticed the lent of the wall chimney
from the roof of the barn. and the ridge of the
north wing comes very nearly lent with it
with but some feet. And throat as Billings Rom.

302
As library fireplaces, there is no reason why
it should not act the same. — Chimney gas/say
8 ft. high will not hurt, effect. As the draft
in all winds would be greatly improved. —
The chimney stack of new wing is about 20 feet
higher than hall chimney, & unquestionably
affects draft of latter in certain winds! —

Messrs Messers

Made of Oak will be attended to at once.
will call at 230 pm. — Sunday. —

Yours D. Forsyth.
