## No Contract for New Soil Program; Cooperation Is Voluntary, Says Agt. Park

There is no contract in connection with the new soil conservation program, points out County Agent C. F. Park. In other words, cooperation by farmers will be voluntary.

There are two forms for the farmer to fill out. One is the work sheet, to be used in establishing a base, and in which are listed the acreages of the various crops on the farm. The other form is an application to be made later in the year for payment for compliance.

The first step that a farmer takes in qualifying to participate in the program is that of filling out the work sheet to establish a soil-depleting base. One base is established for tobacco and another base for all other crops.

The tobacco base is that established for 1936-39, under the A. A. A. program, or in the case of a non-signer the acreage ordinarily grown, subject to such adjustments as the local committee may make. For other crops the base is the acreage grown in 1935, adjusted by the local committee. Members of community committees and workers in the county agent's office will assist farmers in filling out work sheets.

Under the new program a farmer may change up to 30 per cent of his tobacco base acreage into soil-building crops and receive payment of 5 cents a pound for his normal yield of burley and 3½ cents for dark tobacco on the land shifted from tobacco production.

In the case of corn and small

grains, sweet sorghum, soybeans har-

vested for hay and seed, potatoes

and sweet potatoes and other soil-depleting crops, farmers will receive payments per acre according to the ratio of productivity as compared to an average of \$10 per acre for the whole country. A shift in these acreages may be made up to 15 percent of the base.

The foregoing payments are known as soil-conserving or diversion payments. In addition, a farmer may obtain a payment for planting approved soil-building crops or for carrying out approved soil-building practices. The rate of this payment will be recommended by the State Committee, but the total soil-building payment for each farm cannot exceed \$1 for each acre of crop land on the farm used in 1936 for soil-building and soil-conserving purposes.

Farmers cooperating in the new program will not be required to change 30 percent of their tobacco base acreage or 15 percent of the base of other crops to soil-conserving crops, but they must have a total acreage in soil building and soil conserving uses on their farms this year at least equal to 20 percent of the soil-depleting base, or divert the necessary percentage to receive the maximum payments.

Another limitation is that no farmer will be paid for diverting acreage unless he produces a surplus above the farm needs of food and feed.

All farmers are requested to make a note of the number of acres of corn, wheat, rye, oats, soybeans, barley, and sorghum harvested on their farms in 1935 and bring this information with them to the agent's office when making out work sheets.

"(a) Has attained the age of 65 years;

"(b) Has income which, with contributions, money, subsistence, or service from relatives or others, is inadequate to provide a reasonable subsistence;
