BAGGAGE**

People communicate through words
and signs.

Words may be heard, or seen. . .

... or felt.

We hear words direct. . .

... or through any of several
amplifying devices.

We see words in newspapers,
magazines, books . . .

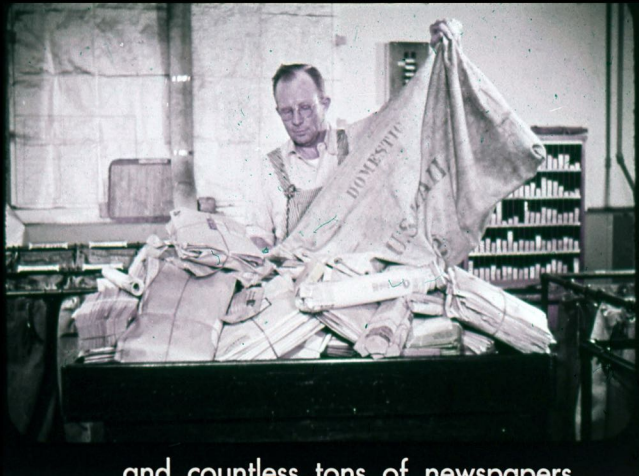

. . . and in many other places.

Railroads play a vital part in
communications.

Railroads not only carry letters . . .

... and countless tons of newspapers,
magazines, and books ...

. . . railroads also haul the pulpwood. . .

... chemicals and equipment ...

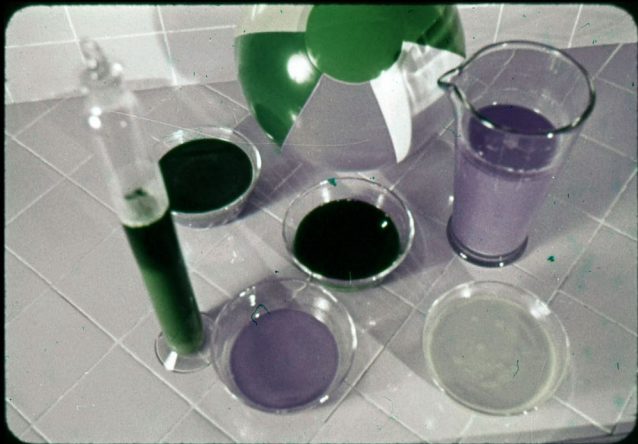

... which make finished paper possible.

And, from all over the nation . . .

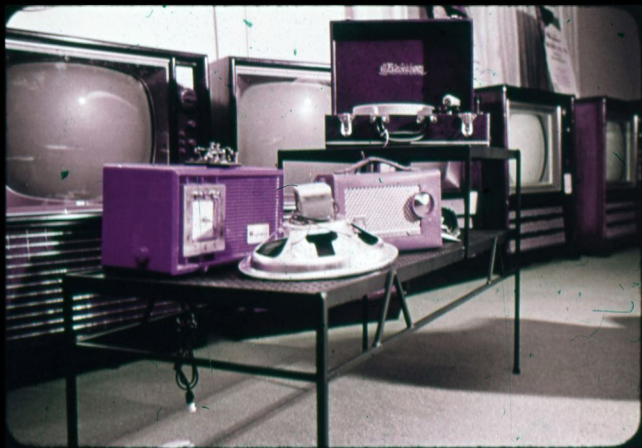

. . . they assemble the metals. . .

... plastic and wood ...

... and electronic parts which make possible...

. . . the loudspeakers, telephones, radios,
television sets . . .

. . . and all the other marvels of
modern communication.

While hauling the raw materials
to the factories. . .

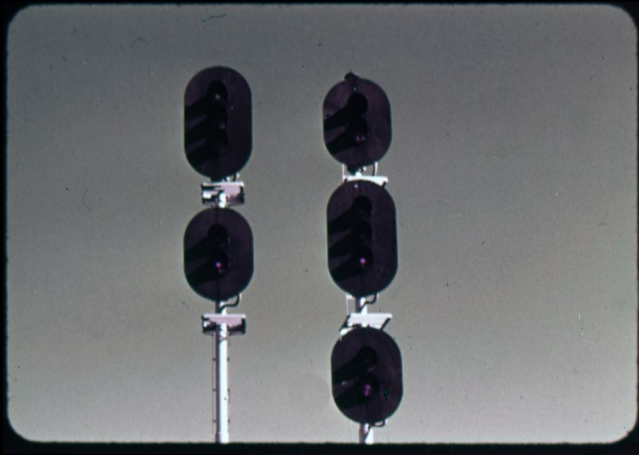

... and the finished products to the
markets...

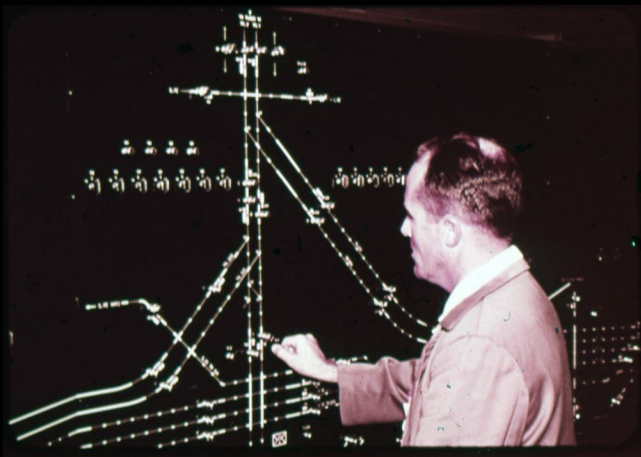

. . . railroads themselves use all of these
modern means of communication. . .

. . . controlling train movements by
telephone or telegraph. . .

. . . or by automatic block signals . . .

... some controlled remotely by an operator many miles distant.

Radio-telephone is used between
the freight conductor . . .

... and the engineer ...

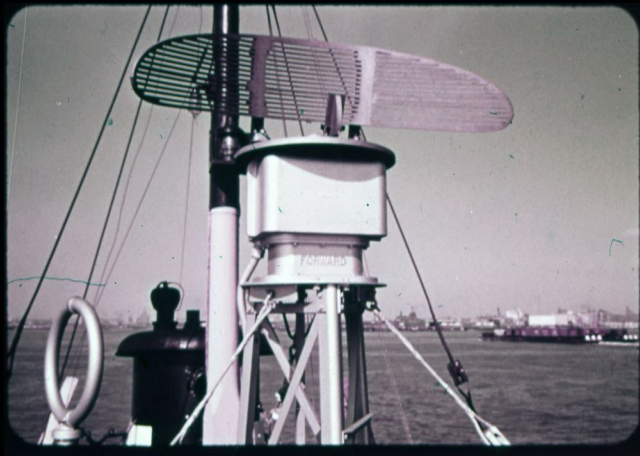

. . . and between trains and wayside stations.

Walkie-talkie type radio . . .

. . . and television in big yards. . .

. . . radar on railroad tugs . . .

. . . loud speakers and other devices. . .

... help give us the efficient railroads
we have in America today.
