**MIDDLEBORO**

The heavy frosts of the past few mornings has killed the larger part of the blueberry crop and word has come from the rural sections that the early blueberry crop has been entirely wiped out. There was a fine bloom on these berries this season and the crop promised to be a bumper one. As for the strawberries, many of the growers report that a large portion of their early crop is gone. The cranberry men, however, are not so hard hit, for they have been preparing for the frosts at this time and water has been kept on the bogs now over two weeks longer than usual.

**Bumper Blueberry Crop.**

According to reports received from all over town, the crop of blueberries is going to be the largest that has been seen for at least a generation. The bushes, low and high, are loaded with big blossoms, and if not killed by frost, which appears in the lowlands almost every morning, there will be a bumper crop.

**Frost and Fire Damage**

**Kill Blueberry Crop**

TOMAH, Wis.—(Special)—A small blueberry crop is predicted for central Wisconsin this season, because of fire and frost damage. Either of these causes is sufficient in itself to work havoc with the crop, but a combination of the two promises an almost complete destruction to this berry, beloved alike by Indian and white man.
