New Report Criteria

Disclaimer: The NET reports in *AIRData* are produced from an extract of EPA's National Emission Trends (NET) database. Data for this report was extracted from the October 2001 version of the NET database. The NET is an emissions database developed by EPA for its internal use. The NET is based partially on emission data obtained from State and local agencies, but it is not a database of official State emissions data. Please contact the appropriate State agency to obtain information on a State's official emission inventory. Please contact the [EPA](#) to report errors.

Readers are cautioned not to infer a qualitative ranking order of geographic areas based on *AIRData* reports. Air pollution levels measured in the vicinity of a particular monitoring site may not be representative of the prevailing air quality of a county or urban area. Pollutants emitted from a particular source may have little impact on the immediate geographic area, and the amount of pollutants emitted does not indicate whether the source is complying with applicable regulations.
