Regal

QUALITY ALUMINUM UTENSILS

built for a lifetime!

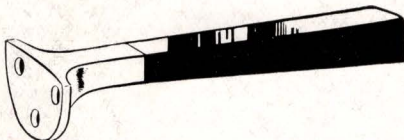

EXTRA... EXTRA HEAVY

The thickness of aluminum is indicated in the drawings at the left. Extra thickness distributes the heat evenly over the bottom. Conserves fuel and adds greatly to the life of the utensil. It pays to buy extra... extra thick aluminum ware and cook the waterless way.

NO-BURN BAKELITE KNOBS

Ultra-modern design which assures a firm grip on the cover. Being of Bakelite, the knobs not only are resistant to fire but stay cool for comfortable handling.

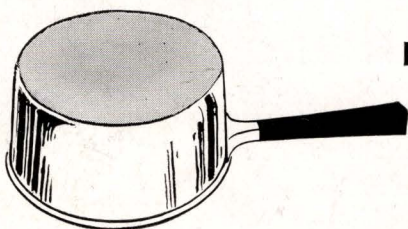

NO-TURN BAKELITE HANDLES

A sleek, good-looking substantial handle which cannot turn in the fitting. The fitting provides a square hole into which the square recessed end of the handle fits snugly. Held in position with bolt running through entire length of handle.

FLAVOR SEAL RECESSED COVER

Permits cooking the waterless way which retains all of the food values and flavor. Minimizes shrinkage of foods and scorching. Foods cook in their own juices and with less fuel, requiring less time and no pot watching.

NO-SCORCH HEAT DIFFUSING BOTTOMS

The satin-finish bottom is clean and sanitary. It diffuses the heat over the entire bottom surface. Even heat cooks thoroughly without scorching. You will appreciate this feature.
