Technical drawing of a mechanical part, likely a bracket or support. The drawing shows a side view with a semi-circular cutout on the left. Dimensions are indicated by arrows and numbers: a total width of 80, a distance of 40 from the center of the cutout to the right edge, and a distance of 10 from the top edge to the center of the cutout. A small circle with a dot is located near the bottom right corner.

WATT

TYPE "G"

ATTENTION

The energy in watt consumed in a certain resistance is not proportional to the amount of the current but proportional to the square of the current. To find the watt output for instance of Type "G", connect leads of resistance to indifferent and medium terminal, measure current on upper scale of the meter, mark the corresponding point on the ampere scale of the chart, follow vertical line up to the point where it crosses the curve, and read watt output on the corresponding horizontal line.
