— Staff Photo by Don Bartlett

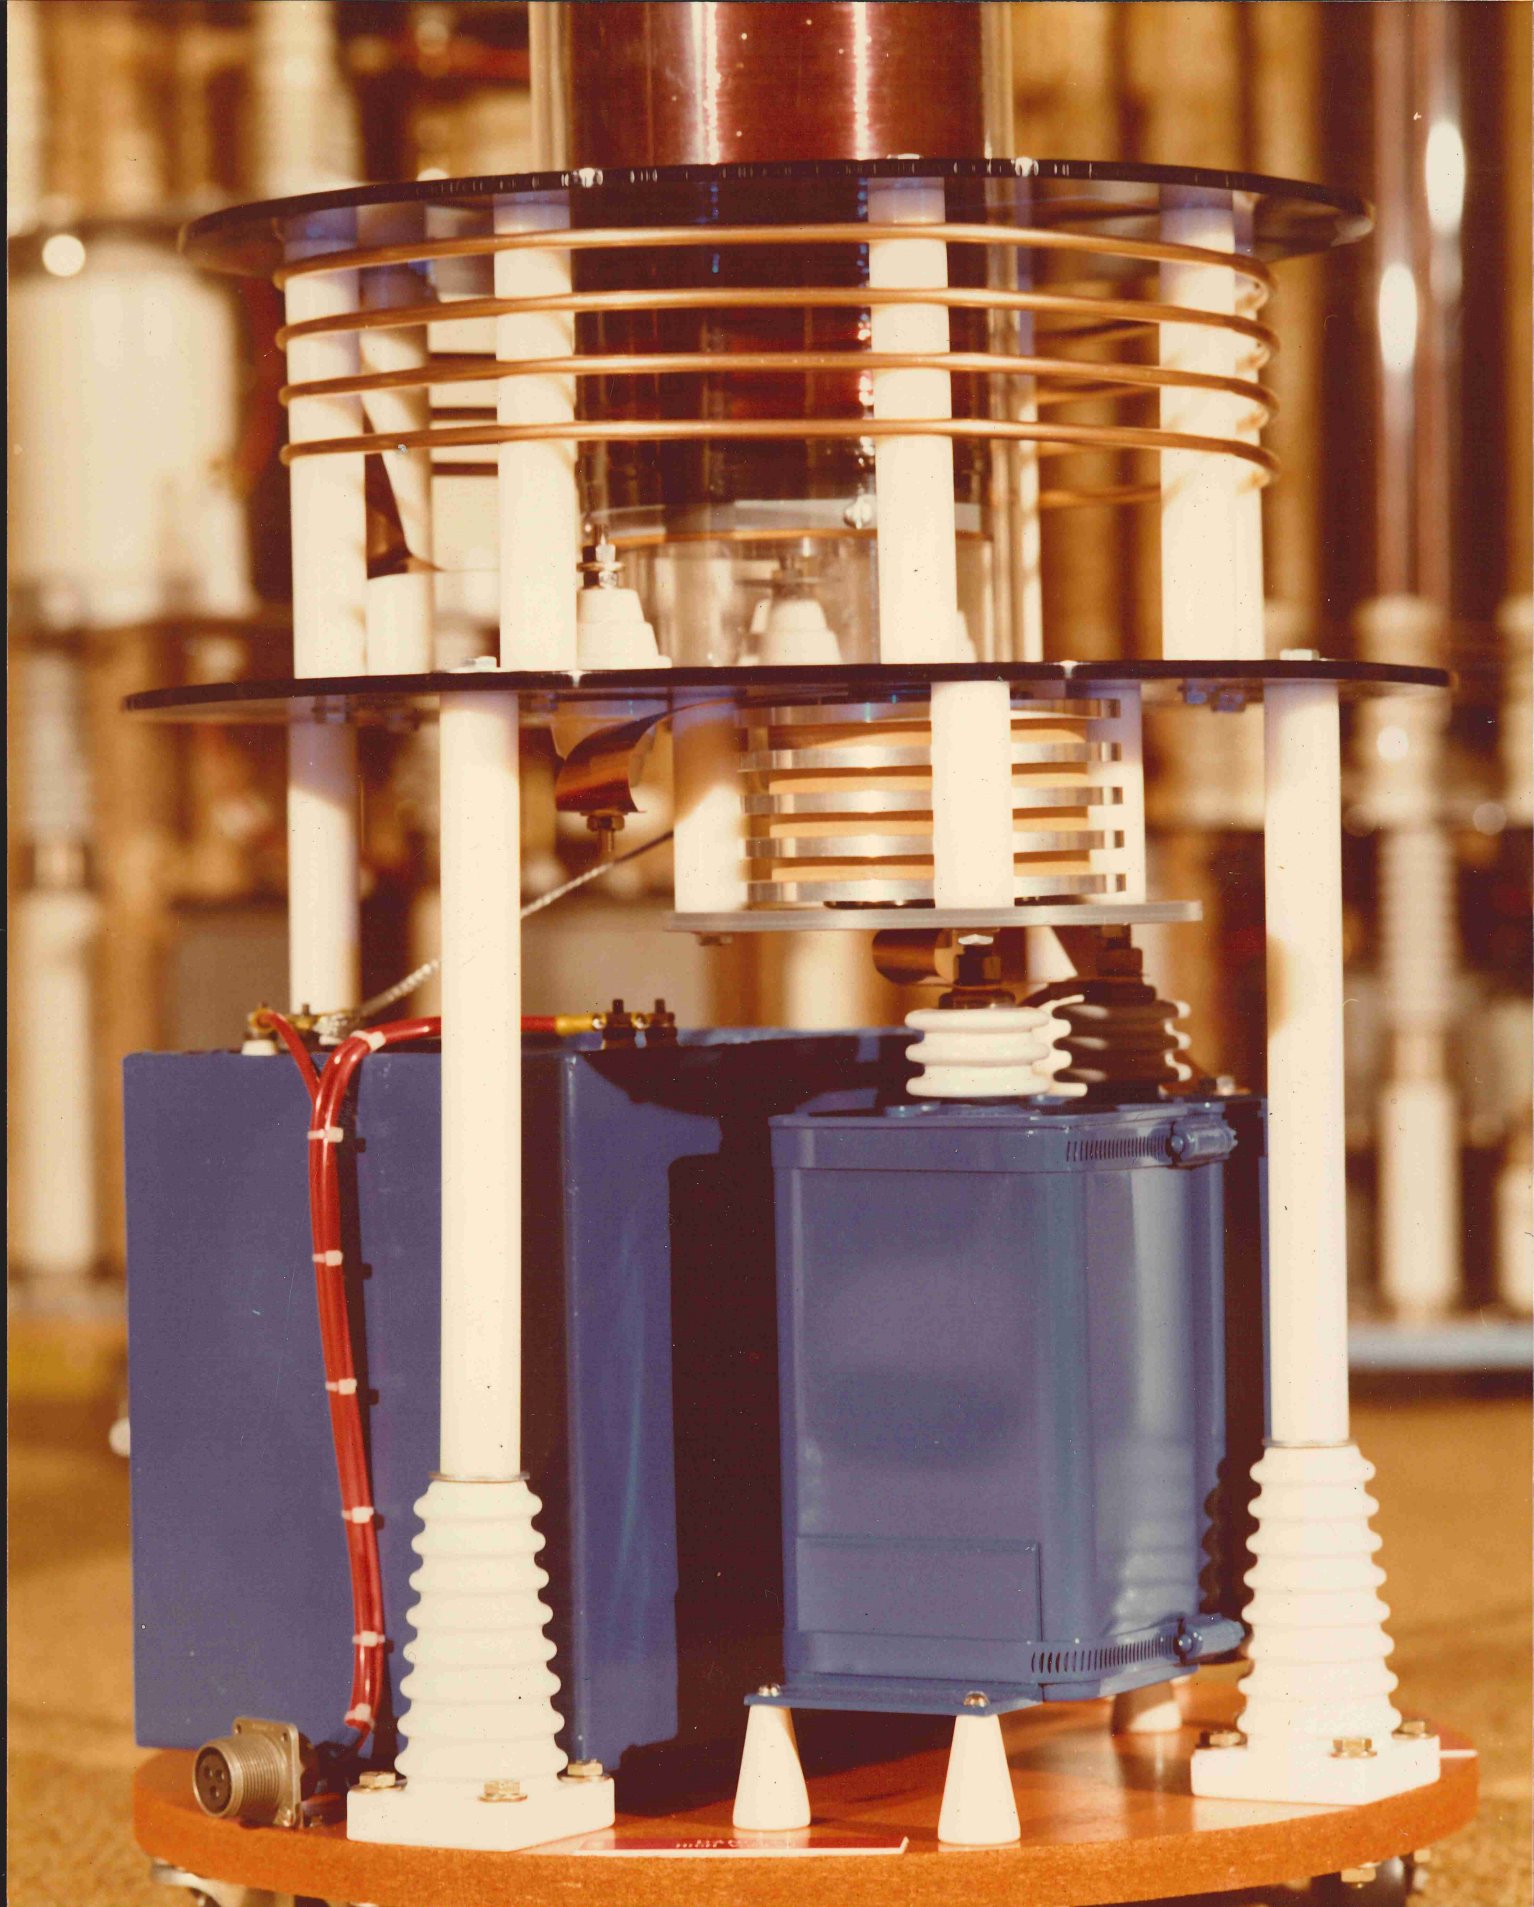

MAN-MADE LIGHTNING BLAZES

Lightning-like sparks radiate three feet outward from a doughnut-shaped Tesla coil at the Fleet Space Theater in Balboa Park. The

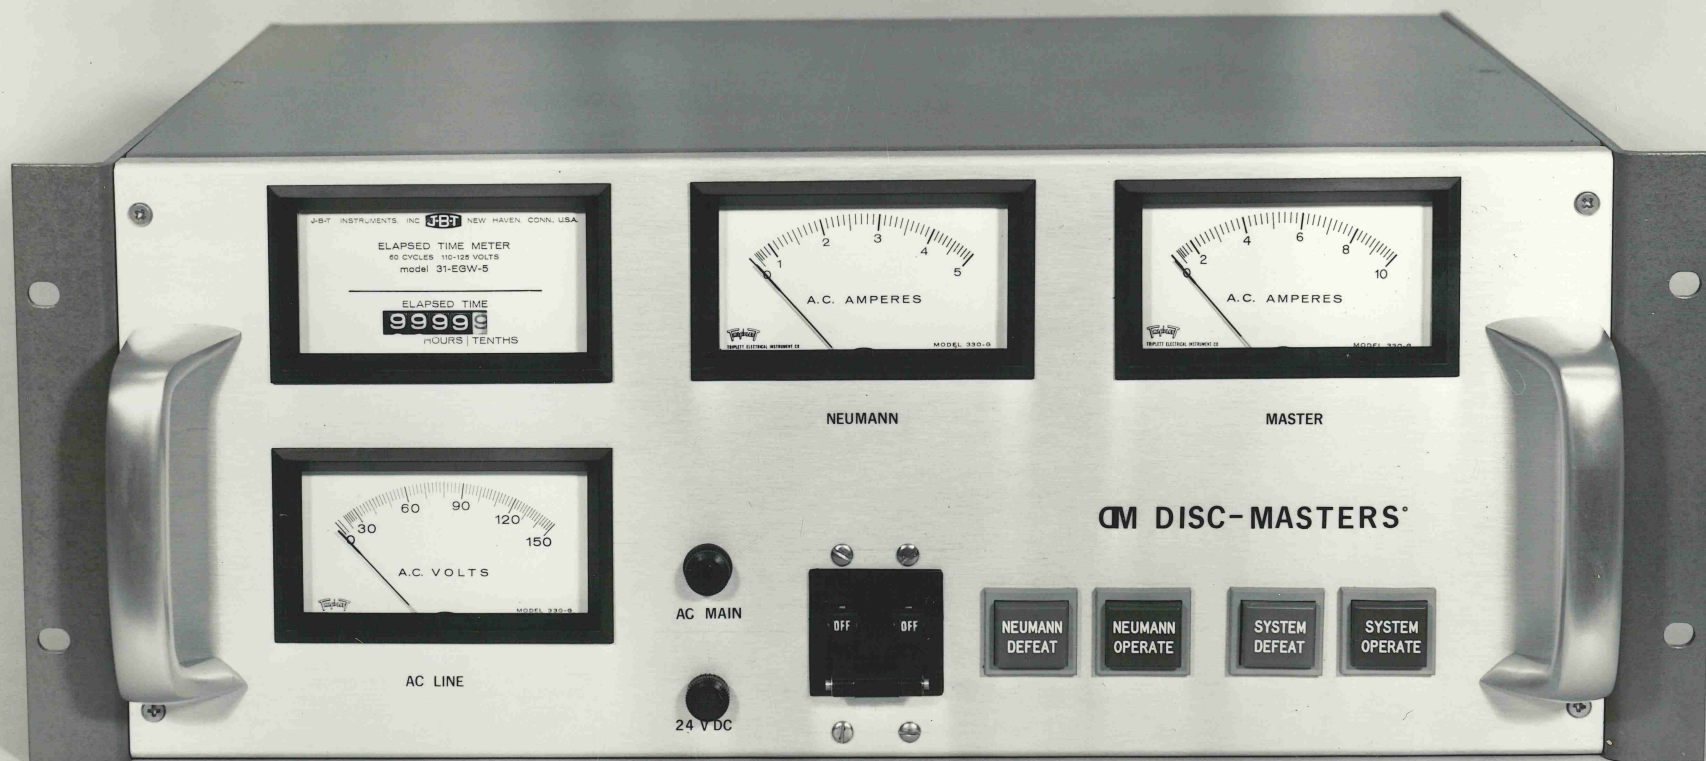

straight bars of light in this quadruple exposure were made by a 40-watt fluorescent tube. Arcs generated by the 750,000-volt coil are

relatively safe because they contain low amperage, or current, but are powerful enough to illuminate the fluorescent tube.
