

1571191

should these be separate figures?

136 GOWER STREET,
LONDON, W.C.

Oct. 17th 1889

Dr. W. E. Stevenson.

Dear Sir,

Might I ask if you have made
sufficient progress with the work on
Medical Electricity as to give me an idea
when it may be ready for us?

There have been one or two little
books just published touching partly
on the point & the sooner we can
get out your work the better it will
be I feel sure.

I should be pleased to send

any books from our Library
for your use that you might
care to see.

The recent books are -

- Bigelow's Gynaecological Electro-therapeutics
with introduction by Apostoli.

- Static Electricity by Dr. MacLure

- Galvanic Electricity by Skene Keith.

I trust to hear from you that
the book is nearly ready.

I am, dear Sir,

Yours faithfully
Morris Lewis.

136 GOWER STREET,

LONDON, W.C.

April 22nd 1880

Dr. Stevenson.

Dear Sir,

Thank you for your note. I was hoping to hear that the M.S. was nearly finished, and am glad you think you can let us have some copy to commence on in a few weeks. We are quite ready to begin, and if it were possible to get the book out before the Autumn I think it would be very desirable to do so. I expect you will have seen another new book just out, by Dr. Bolton Thomson, "Electricity in General Practice" - if not I will send you one with pleasure.

I am, dear Sir,

Yours faithfully,
Morris Jones.

136 GOWER STREET,

LONDON, W.C.

Jan. 15th 1891

Mr. Stevenson,

15 Mansfield Street,

Portland Place.

W.

Dear Sir,

We have just received these blocks, of which I enclose proofs from the engraver - (for which we have paid) which were done in April last year.

Perhaps you would kindly place these proofs in your copy where the figures come, so that we may identify them.

Just now we should be glad of some work for our printers, and if the copy were sufficiently advanced to allow us to put the first part in type & print off, we should be very glad of it - that is if it would be quite convenient to you to let us have it.

I am dear Sir,

Yours faithfully, Morris Lewis.

Oct. 18. 1889

Dear Sir

The book I am writing for
you I am afraid is not so
forward as both of us would wish,
but I have been working at it
by degrees and have several
chapters complete. I should be
very pleased if you could some day
call upon me and see what I have
done, if that is not possible I wd
call upon you and show you the
manuscript I am adopting. I have too
many paper and half finished
parts to bring them all to you. My

work on Electrolysis which I told
you Messrs Churchill have in hand
for me is now half through the
press. Many of the blocks I am
using for it will come in to your
~~books~~, but yours must be of more
of a complete treatise and I
want it to be a good one. I am
sorry I ~~cannot~~ am so hard worked
that I cannot get on more quickly.

P.S. I have all the ~ I am dear Sir
works to which you
alluded.

Yours truly
Wells

Lewis Thomas Esq

Jan. 17. 1891

Dear Mr. Lewis

I have finished the 1st 2nd 3rd & 11th chapters. The impressions
you have sent me ~~belong to the 8th~~ ^{are for} ~~Chapter 8~~ ^{completed.}
Chapter 8 which is almost ~~finished~~ ^{completed}, and
~~I have not~~ Since I wrote to you
I have ^{been} been writing the 5th chapter -
a very long one - so that I may be able
to continue the chapters consecutively.
^{and then that the printing} Many of the others are partly written.
I have so many interruptions that
I cannot get on ^{nearly} ~~half~~ as fast as I
~~would wish~~. I have now to get up a

a Complimentary Dinner to Sir
Geo Humphry who was knighted
only last wke.

I shall want some illustrations
for Chapter 3. Those numbered
34. 41. 43. & 44 in Dr. de Watterville's
book would do for some of them if we
may use them. If not I could get
some of them from instrument makers

Yours truly
GEO

Upper Tulare River S.W.

5 Aug 1885.

My dear Sir,

You can get the block
of the enclosed from the

British Sp. Co., Aldemarle Street.

The other is from a letter of Cap. Abney's
I have sent it to him, and asked him
to give you the necessary directions.

Can I have a proof in steps of
the Lecture, as I should be free
to make any desirable verbal
alterations. A Lecture is different
from a paper, and many little
alterations of wording may suggest
themselves when it is seen in

print. Perhaps I might leave
this at once, & the ~~disposals~~
can go into the first paper
proof. I can then add the etc.

Will it be agreeable to you,
and the Lady you spoke of,
to pay us a visit next
Saturday about 4 p.m.?
We shall be very pleased to

See you.

Yours truly
William Huggins

1929 May 4

Dear Sir,

The Astronomer Royal
in 1858 was G. B. Airy — but
I can't believe his signature
is not easy to read. The
Astronomical Staff was "Rev.
Robert Main, Mr Edwin Dunkin,
Mr Hugh Breen, Mr William Ellis,
Mr G. S. Cruick & Mr W. T. Lunn.
In the Magnetic & Meteorological
Dept. were Mr Glaisher and
Mr Downes. This may help
to pick out the bad writer.

Yours faithfully

J. W. Dyson

ASTRONOMER ROYAL

Norman Lockyer
