

Thompson Stitcher, No. 14

Our New Double-Head Machine has all the advantage of two machines in one. This Machine runs one side with Flat Wire on a flat table, and on the other side with Round Wire on a saddle, the only adjustment required being in setting the table to the height for different thicknesses of work.

Either head can be run independent of the other, or both heads can be run at the **same** time on two different classes of work. One Driving Pulley, 10 x 3 inches. Speed, 120 revolutions per minute.

Price, \$400.00. With combination tables, both sides, \$470.00.
