

King James CAST COAT 1 SIDE

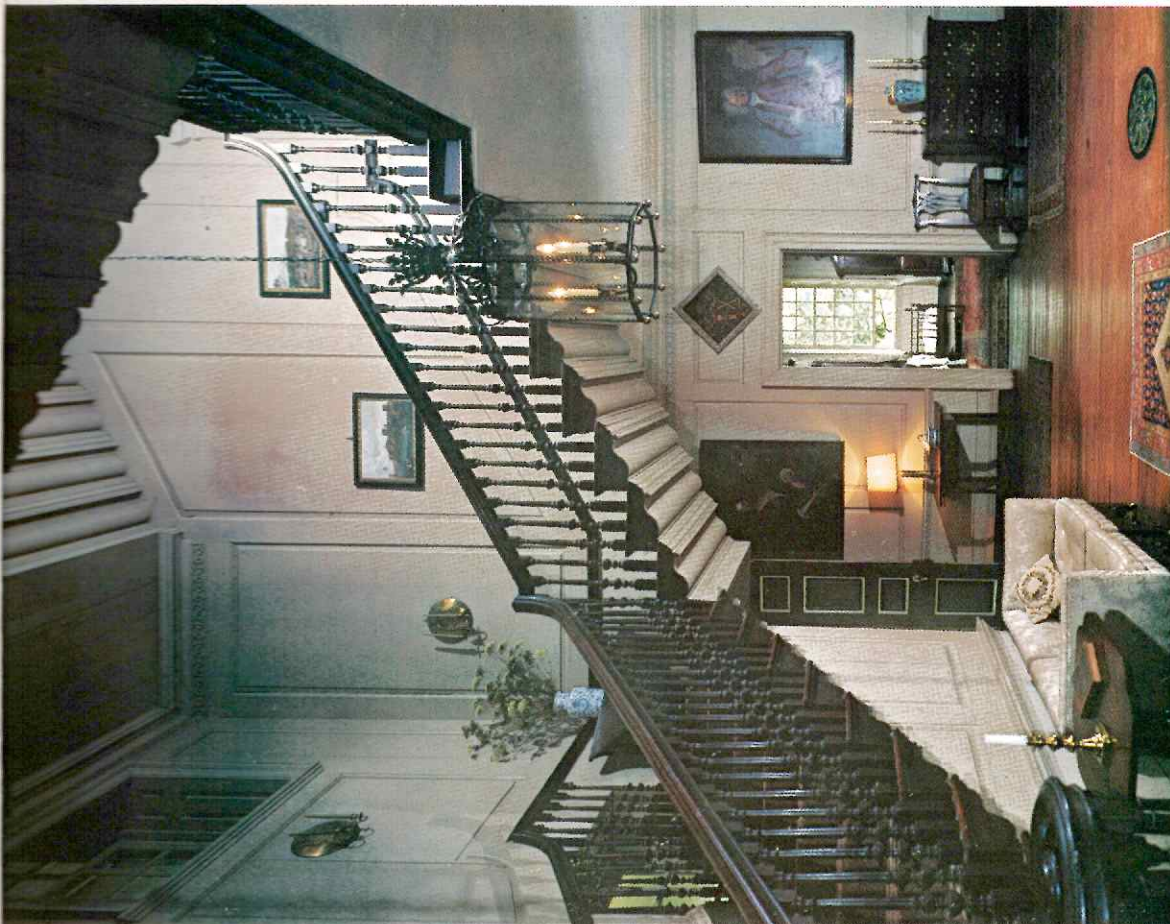

This is King James Cast Coat. Its smoother whiter surface offers the ultimate in sharp, clear reproduction by letterpress, offset lithography, and gravure printing. The use of high gloss and metallic inks enhances the mirror-like characteristics of the sheet to allow the printer the utmost fidelity in reproduction.

Due to superior strength and resilience, blind embossing can be accomplished with great attention to detail. As illustrated on this cover, metallic foil hot die stamping adds still another exciting visual effect. Die cutting, scoring and folding can be achieved cleanly and smoothly with remarkable resistance to surface fracture.

King James Cast Coat cover is stocked at the mill in the most popular sizes shown below. Consult your James River merchant for local stocks.

SIZE AVAILABLE BOTH GRAINS	.008 PT. SHEET / CTN.	.010 PT. SHEET / CTN.	.012 PT. SHEET / CTN.
