

ROD EMBOSSING PRESSES AND INKERS

We are the only manufacturers who have ever built large and powerful presses of this description, which have always been known under the name of "The Rod Press."

In our No. 5, the four rods are each $3\frac{3}{16}$ inches in diameter, giving it more than double the strength of the heaviest Arch Press known. This press is now a necessity in every bindery doing heavy work, and is the one upon which was done the multiple ink work or chromatic blending of colors which created such favorable comment during the past. Send for sample of the work if you have not seen it.

Our large sizes of Rod presses are used in every variety of manufactures on Wood, Plush, Velvet, Lithographic and Leather work, while our No. 7 is adapted especially for and used by every manufacturer of fine embossed Wall Paper in the United States. Steam or Gas Head furnished as desired.

Atmospheric Gas Burners from \$10.00 upward.
