

I N T R O D U C T I O N

IN this catalogue are shown the results of seventy-five years' practical experience in the manufacture of presses for Embossing, Smashing, Inking, Leather Graining and Smooth Plating. This has enabled us to specialize these machines.

A thorough knowledge has caused us to incorporate in the general construction of our presses many minor details, which add greatly to the value of a machine. We use only skilled labor and best material.

Special attention is called to the fact that all rods used in our presses are made of open-hearth steel. Only cut gears, steel pinions, steel cams and phosphor-bronze bearings and journals are used.

A partial list of the users of our presses will be found on the following page. We refer to them as believers in our presses.

T. W. & C. B. SHERIDAN CO.
