

May we say just a word in conclusion concerning the other units of the Clyde Line which are proving their worth in all parts of the world?

In addition to the skidding equipment herein illustrated the Clyde Iron Works Sales Company is prepared to furnish machinery for log handling purposes driven by gasoline or electric power. Also special equipment for swamp and pull boat

operations, mountain inclines, or mill and storage yards.

The Clyde Iron Works Sales Company welcomes the opportunity of going over the conditions with interested parties on the ground where the machinery is to be used so that the best type of machine and combination of equipment for the existing conditions may be determined.

Let us have your inquiries with a view to assisting in your log handling problems.
