

In photo 6, we finally get a good look at the loader itself as another log is loaded. Looking at the loader, we can see the loader operator D.W. Gill at his working position watching the logs as he moves them. On the other side of the loader, fireman F. E. Branch would be taking care of stoking the boiler with left over pine, watching the water level and making sure that the steam gauge stayed just below the point of the safety valves going off.

Underneath the loader, we can see that another log car is coupled to the first one, ready to be pulled forward and loaded in the proper time.

Also, we can see that the bulldozer has been pulled off to the right, away from the action so that crew must be satisfied that they have solved whatever problem that they were repairing.
