

practice it where the hazards and risks are great. It is difficult to figure out when and how to do this where slash pine seedling are found in abundance in mixture with longleaf.

*Chairman Butler:* Any other suggestions?

*Mr. Shirley Allen* (Ann Arbor, Michigan): I hope you people from the South will be careful in talking to southern visitors from the Lake States. They may become enthusiastic about the merits of fire and come back home dangerous citizens. Please tell them that if they want to try your systems out up north to do it in the dead of winter. Forestry and fire wont mix in the Lake States.

*Mr. Roy Headley* (U. S. Forest Service): As many of you know, I have much in common with many of the papers which have been read this afternoon.

But I do think some one should put

into the record a good natured protest over the one-sided nature of the program. If any one is looking for evidence of censorship, for the spirit of censorship, he need look no further than the make up of the afternoon's program.

*Mr. Komarek* (Thomasville, Ga.): I think that this is the whole trouble. The whole program up to this time has been one-sided. This is the first time that censorship on the subject has been removed and we have been told the facts.

*Mr. Cary:* May I have one minute now? I just want you to consider my points.

*Chairman Butler:* Of course, we are trying to be as fair as we can so that everybody may have an opportunity to talk within the limits of the time available. We have had a lot of territory to cover and very little time to cover it in. The time is up and I hereby declare this meeting adjourned.

#### WE WILL PAY

50c each for copies of the January, 1934, February, 1934 and March, 1934, issues of the JOURNAL OF FORESTRY. If you wish, credit will be applied on your dues. Send along these copies today.
