

May 23/56, 6 P.M. General observation: Remains of a circular mound estimated 50' in diameter, about half of which has been cut off by a bulldozer in a line parallel to the ridge (approximately NNW-SSE). A trench 14' x 2' has been excavated along the edge of the bulldozer cut, to various levels, the deepest 36".

Squares were laid off parallel to the bulldozer cut, numbered from a sight line through the center of the mound.

May 26 and 27

The trench was cut to a depth of 48", and squares 5R1 and 10R1 extended to a width of 3".

SD 24" to 30"

Brown clay; few small flecks of hematite and charcoal; few pieces of burned limestone (pebble size); two small pieces of bone, poor state of preservation; many flint flakes.

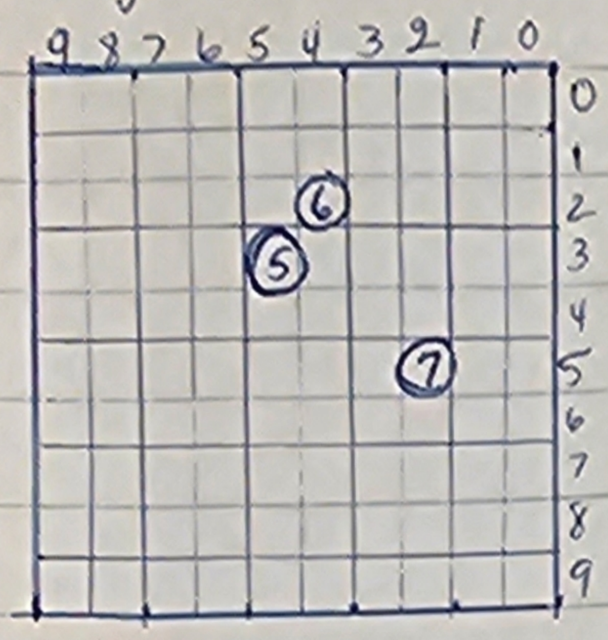

① Grinding stone: oval 9 cm in length, tan, smooth, heavy, worn at tip.

Square 10R1 [5] 10 SD 30"

SD 30" to 36"

Brown clay, harder yellow clay from SD 32"; few small flecks of hematite and charcoal; occasional small bit of poorly preserved bone; some flint flakes; three small pieces of burned rock.

May 27 and 30

Square 5L1

SD 0" to 10" bulldozed off.

10" to 12" Brown humus, grass roots, some flint flakes

12" to 18" Brown clay and humus, few roots, many flint flakes, some flecks of charcoal and hematite. At this level, about half the square ([S] 06 to 96) has been cut off by the bulldozer, turned over as by a plow, and is indeterminate in nature.

(5) Point: tan chert

[S] 53 SD 12"

SD 18" to 24" Brown clay, some flint flakes, small flecks of charcoal and hematite, 2 smooth oval pebbles, ~~labeled~~ D and E; and F ~~[illegible]~~; one piece of hematite 2 cm in length. Three mineral rocks: A. Hematite 8 × 5 × 3 cm

B. Hollow, roughly square hematite 6 × 5 × 3 cm

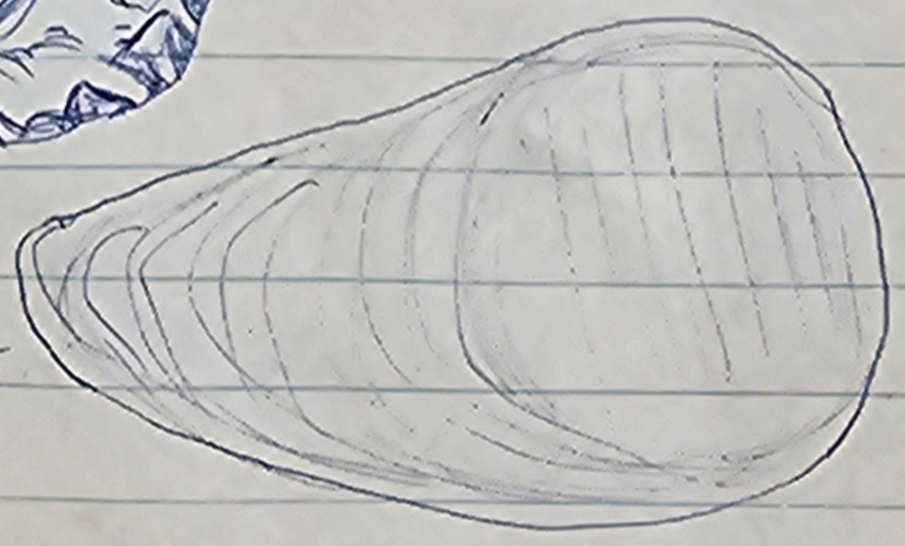

C. Disc of heavy yellowish crystalline mat. 4 cm dia.

(6) Blade: pink Chert

[S] 42 SD 22"

(7) Pecking Stone rough brown granite

[S] 25 SD 25"

SD 24" to 30" Brown clay, few flecks of charcoal and hematite, occasional small piece of crumbling bone. Large piece of limestone surfacing at [S] 94 and 95. One small abrasive stone (G), one smooth, tan, oval pebble (H), two broken blades (I and J), three broken scrapers — general level [illegible]

June 2 and 3 Square 5L1 SD 30" to 36": Brown clay, lighter in color and markedly harder in area of [S] 63-93-96-56. Few small flecks of charcoal and hematite, large limestone slabs projecting at [S] 94 and 95.

(8) Scraper, tan chert.
[S] 22 SD 34"

SD 36" to 42" Brown clay to SD 38" and 39", then yellow clay, harder at the [S] 80 to 86 and 90 to 98. Occasional small fleck of hematite, rare fleck of charcoal, few flint flakes (one worked, labeled K), one large core (4)

(9) Scraper, red chert
[S] 80 SD 42"

June 9 and 10 SD 42" to 48" Yellow clay, vertical cleavage; few large cores and flakes, SD 44" to 46". Sterile (?) at 48" Three rough scrapers, one large core (MNOP)

10L1 SD 0" to 10" Bulldozed off

10" to 12" Brown humus, roots, flint flakes, rare flecks of hematite.

12" to 18" Brown humus and clay, flint flakes, small flecks of hematite and charcoal, six small black

July 4 Square 10 L 2

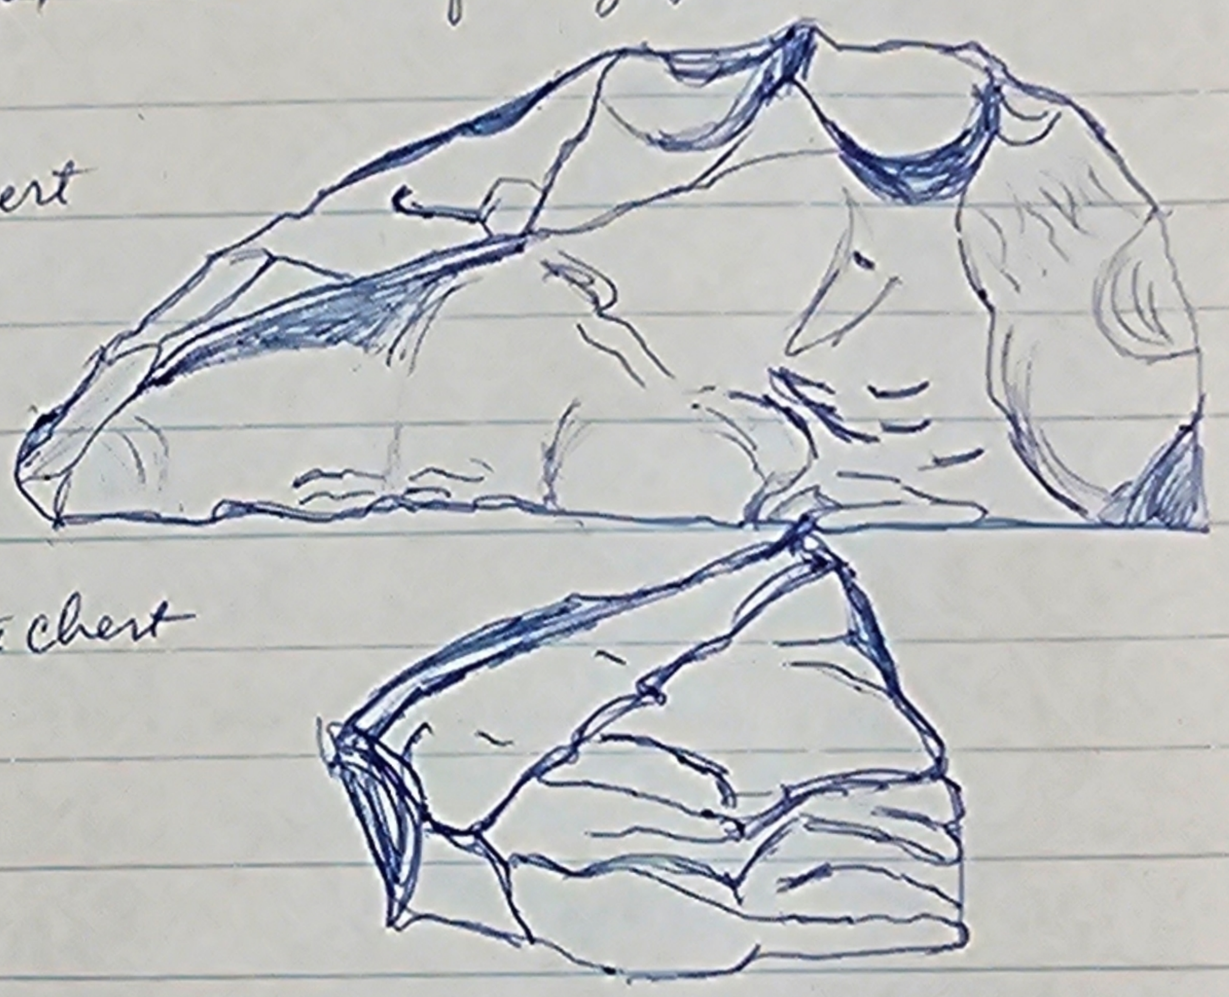

SD 0" to 10" Bulldozed; 10" to 12" brown soil, few flint flakes

SD 12" to 18" Brown clay, many flint flakes and cores; some small pieces of hematite; bits of carbon. Disturbed by bulldoze from S 04 to 94 westward. One broken scraper (S)

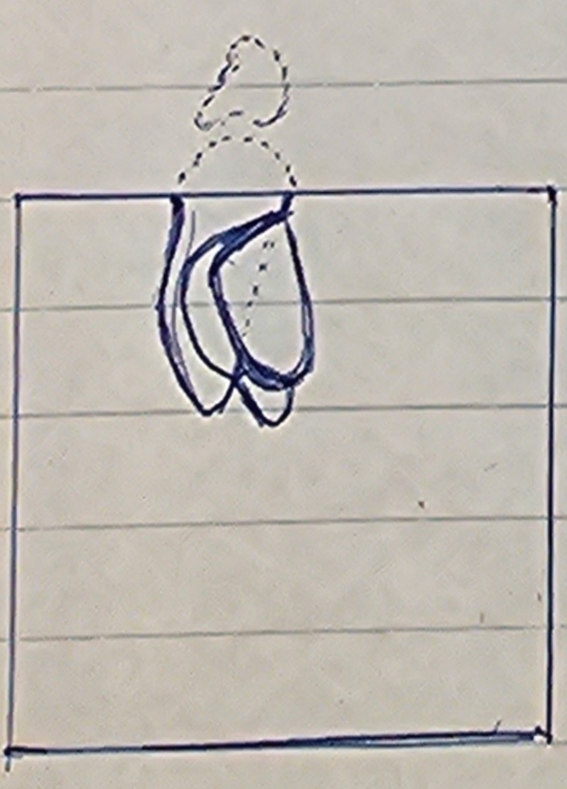

SD 18" to 24" Brown clay; many flint flakes; few bits of hematite and charcoal. Bulldozed from S 06 to 96. One white quartz pebble 3½ x 2 x 2 cm.

(15) Scraper - white chert
S 81 SD 20"

(16) Core hard white chert
Bulldozed area

SD 24" to 30" Very hard light brown clay above limestone slab; darker and softer in bulldozed area S 06 to 96; some flint flakes; few flecks of hematite and charcoal; one small burned rock.

SD 30" to 36" Brown clay, lighter and harder in area of limestone slabs; few flakes of flint and few flecks of charcoal and hematite. Limestone slabs continuous from square 5L1 extend to S 43 and 63 Bulldozed area S 06 to 96 and westward, to depth varying from 30 to 34 inches.

July 6 and 7 Square 15 L1

SD 0 to 10" Bulldozed; grass and weed regrowth

SD 10" to 12" Black soil, roots, few flint flakes

SD 12" to 18" Brown soil; a few flint flakes and flecks of hematite; Two pieces hematite 2cm + length (T+U)

(18) Scraper - tan chert

[S] 34 SD 16

SD 18" to 24" Brown clay; few flint flakes and flecks of hematite; two pieces of burned rock.

SD 24" to 30" Brown clay; some flecks of hematite; rare flecks of charcoal. Limestone projecting at [S] 54, 94 White chert core (V), red sandstone half-disc (W)

(19) Abrasive stone, grooved on both faces. Dark red sandstone

[S] 78 SD 29"

SD 30" to 36" Brown clay; few flint flakes, rare bit of charcoal; numerous flecks of hematite. One piece of limestone about 8" diameter, beneath which are a few small fragments of burned rock; no definite fireplace structure. Limestone projecting from north wall at [S] 94. One broken scraper of gray chert

SD 36" to 42" Brown clay; few flint flakes; occasional fleck of hematite. One round brown pebble (X)

(20) Scraper - tan chert

[S] 46 SD 40"

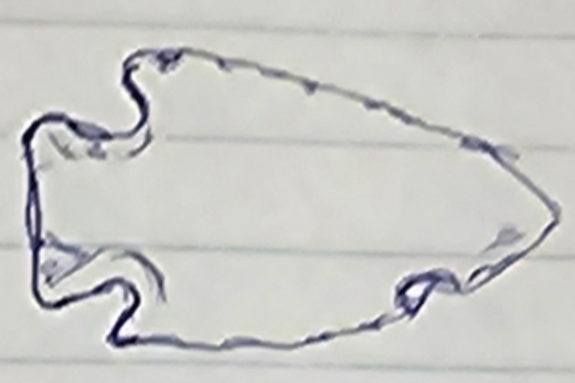

Sept 1956 - Square 5 R A. SD 0"-6" Black-brown humus, grass and weed roots, few flint flakes.

SD 6" to 12" Brown humus, roots, few flint flakes and flecks of hematite

(27) Point, pink chert

[S] 52 SD 9"

SD 12" to 18" Brown soil and clay; few flint flakes; few small bits of hematite

(28) Scraper

red chert

[S] 43 SD 15"

(29) Broken celt, pink granite

8 x 7.5 x 4 cm

[S] 86 SD 16"

SD 18" & 24" Brown clay; few flint flakes; barren

SD 24" & 30" Same, Clay very hard

SD 30" & 36" Very hard yellow clay; small area at center showing few flecks of charcoal; few flint flakes and cores; small piece of hematite; 1 white quartz pebble.

(30) Polished hematite

[S] 01 SD 36"

SD 36" to 42" Brown and yellow clay; few flint flakes

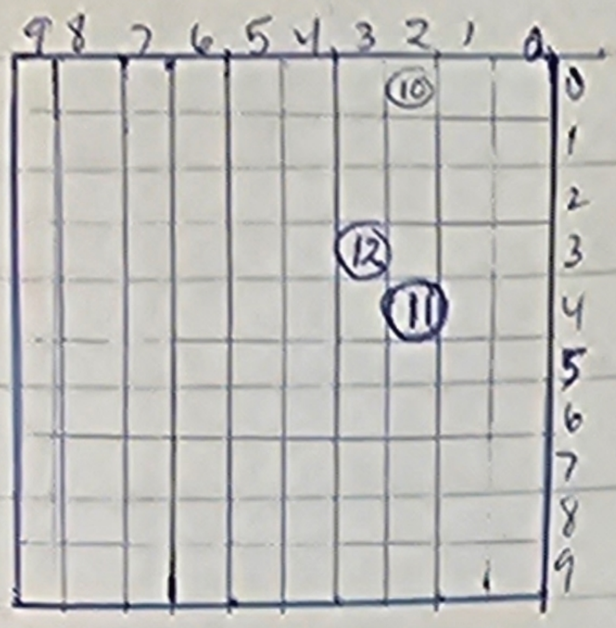

Two pieces of worked flint, probably scrapers (A1 & B

SD 42" to 48" Yellow clay, vertical cleavage below SD 44

Few flint flakes and cores, 43" to 46"; seeming sterile, but one scraper at SD 48" [S] 99 SD 48" (31) gray chert

Final corner

10L1

(10) Grinding stone (?) pink granite, oval 15×5 cm [5] 20 SD 12"

SD 18" to 24" Brown clay; many flint flakes, occasional small piece of burned rock; few flecks hematite; one small piece of white quartz, one smooth pebble (R)

(11) Grooved pebble, black

[5] 24 SD 23"

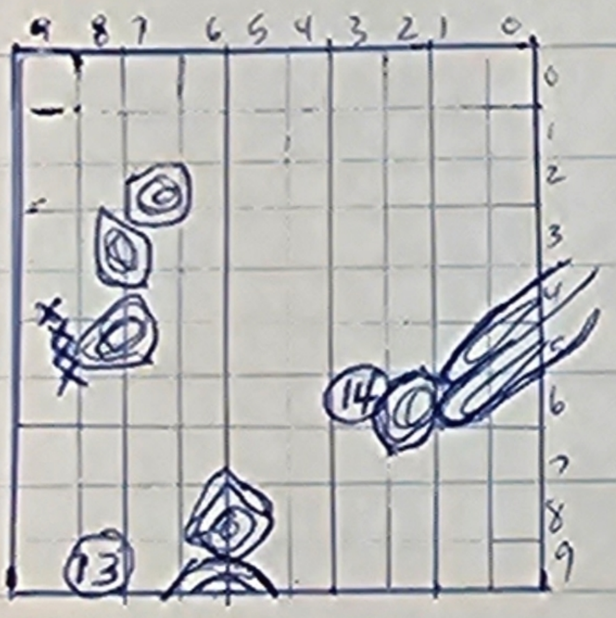

(12) Broken blade, gray chert

[5] 33 SD 24"

10L1 - SD 24" to 30" Brown clay; many small bits of charcoal and hematite; some flint flakes; few small pieces of burned rock; second area of limestone slab

(13) Worn pebble (pecking stone?) soft gray stone, stained at one side

[5] 89 SD 30"

SD 30" to 36" Brown clay; few flecks of hematite; some flint flakes; two groups of limestone slabs and part of a third, projecting at [5] 59 and 69. Mass of charcoal ash from single branch a log, extending some 10" along group of limestones at [5] 94 to 85, SD 30" to 31", Taken for testing. Bone (14) at point of rock, [5] 36 SD 32

SD 36" to 42" Brown clay; few flint flakes; occasional fleck of charcoal and hematite. Human bone, SD 38" at point of rock [5] 69 — extending into 10L2. Burial recorded as a unit for bot

10 L1 and 10 L2

SD 36" to 42" Brown clay, harder in area of limestone slabs; few flecks of hematite and charcoal; few flint flakes; two shrub or tree roots; limestone; stones

SD 42" to 48" Brown clay, yellow clay; 2 woody roots; few small flint flakes; occasional fleck of charcoal and hematite. Cores and flakes SD 44" to 46"; sterile yellow clay SD 48"

Bones: # 1-9 SD 38" also 2 teeth

10-36 SD 40"

(22, 23, 24 beneath group 3, 4, 5, 6 (with muskrat tooth and human incisor)

37-43 SD 42"

44-51 SD 44"

52-89 SD 42"

90-117 SD 42"-44" beneath first group. Scattered order — no anat. relationships.

(17) Beaver teeth: [S] 27 SD 42" in conjunction with bone # 52, vertebra.

15L1 SD 42"-48" Hard yellow clay; rare flint flakes; one smear of hematite; occasional large cores at SD 46" Sterile at 48"

15L2 SD 0 to 10" Bulldozed; 10" to 18" disturbed from S 04 to 94 westward
Brown soil and clay; few flint flakes and flecks of charcoal + hematite

SD 18-24" Brown clay, bulldozer-disturbed from row 4 westward.
Few flint flakes and hematite flecks; charcoal absent

SD 24"-30" Brown clay, disturbed by bulldozer from S 06 to 96, west
Few flint flakes and hematite flecks.

(21) Scraper, gray chert
S 52 SD 25"

(22) Sherd - tan, coarse grit 3½ × 2½ cm
S 97 SD 30"

SD 30" to 36" Light brown clay, lighter and harder in S 05-55 & 09-55
Few flint flakes; rare bit of charcoal; numerous flecks of hematite; one piece (Y) 2×3 cm

(23) Faceted hematite pebble
S 89 SD 32"

(24) Point, pale pink chert
S 83 SD 33"

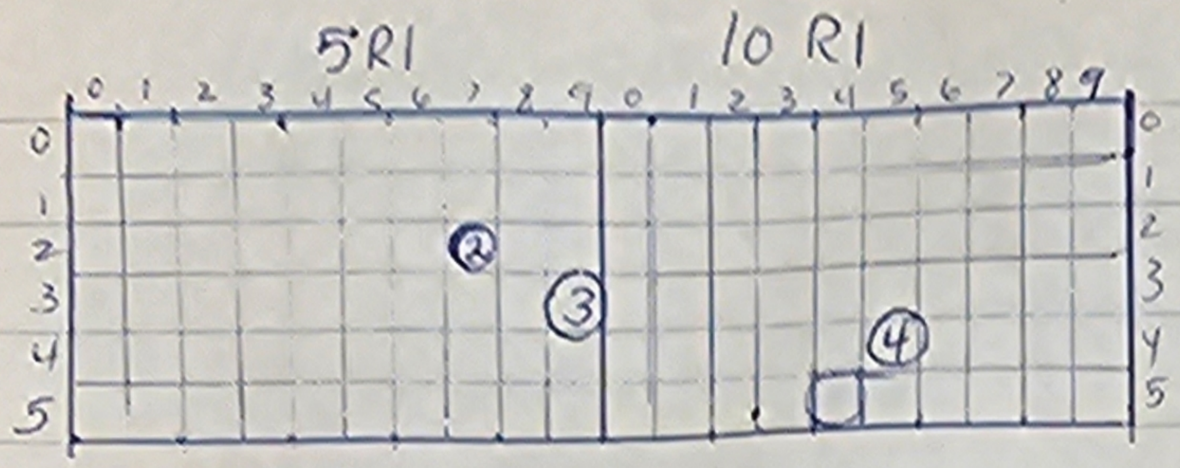

(25) Celt or mano, broken  brown granite 7×6×4.5 cm
S 23 SD 34"

SD 36" to 42" Yellow clay; few flint flakes

(26) Point - pink chert
S 31 SD 40"

SD 42" to 48" Hard yellow clay; few flint flakes; large cores, SD 44" to 47"; seemingly sterile at 48". One rough

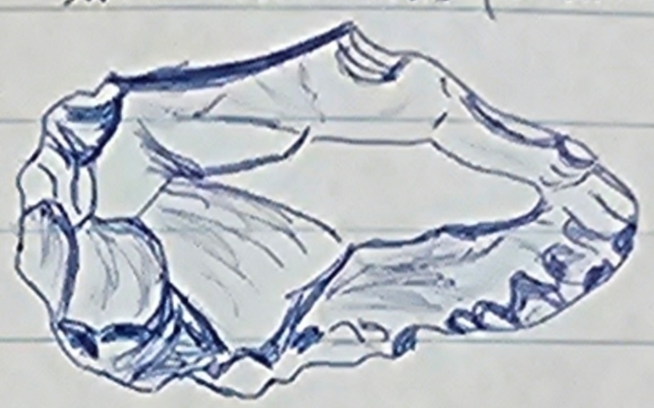

SD 36" to 42"

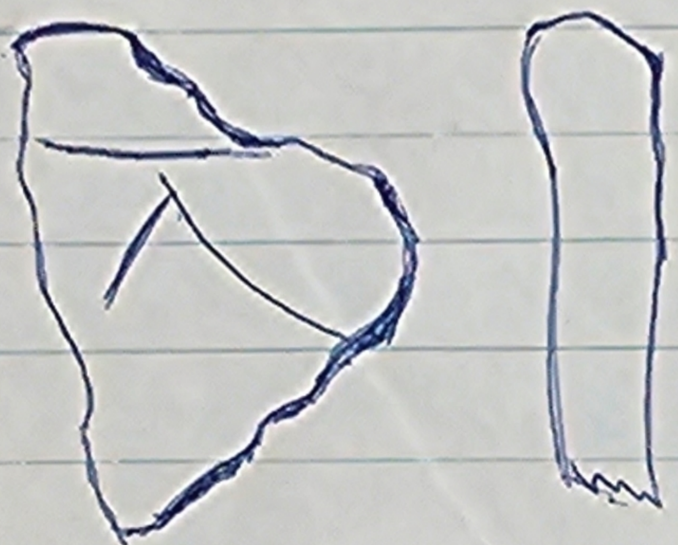

Brown clay; many flint flakes and large cores; few degenerated bone fragments and burned rock pieces, few small flecks of charcoal and hematite, well scattered. (Somewhat suggests midden mat.)

② Scraper: white and tan chert

5R1 [5] 72 SD 38"

③ Rim Sherd

Black, grit tempered, tan surface

5R1 [5] 93 SD 40"

④ Point: pink chert

10R1 [5] 54 SD 42"

SD 42" to 48"

Yellow clay, seeming sterile but showing a few flint flakes and three large cores at SD 44". Apparently sterile at SD 48". Vertical cleavage
