

ARCHAEOLOGICAL SURVEY OF MISSOURI
SURVEY SHEET

_____ County

I. Type of Indian remains (Mound, Village, Burial Ground, etc.) _____

II. Location:

_____ Section _____ Township _____ Range _____

Owner of property _____

Address of owner _____

Location of remains on property _____

Nearest water: Name _____ Distance _____

III. Description of remains.

IV. Condition of Site.

V. If excavated, when and by whom?--Address if possible _____

VI. If excavated, what was found, and where finds are located at present?

VII. This information supplied by _____

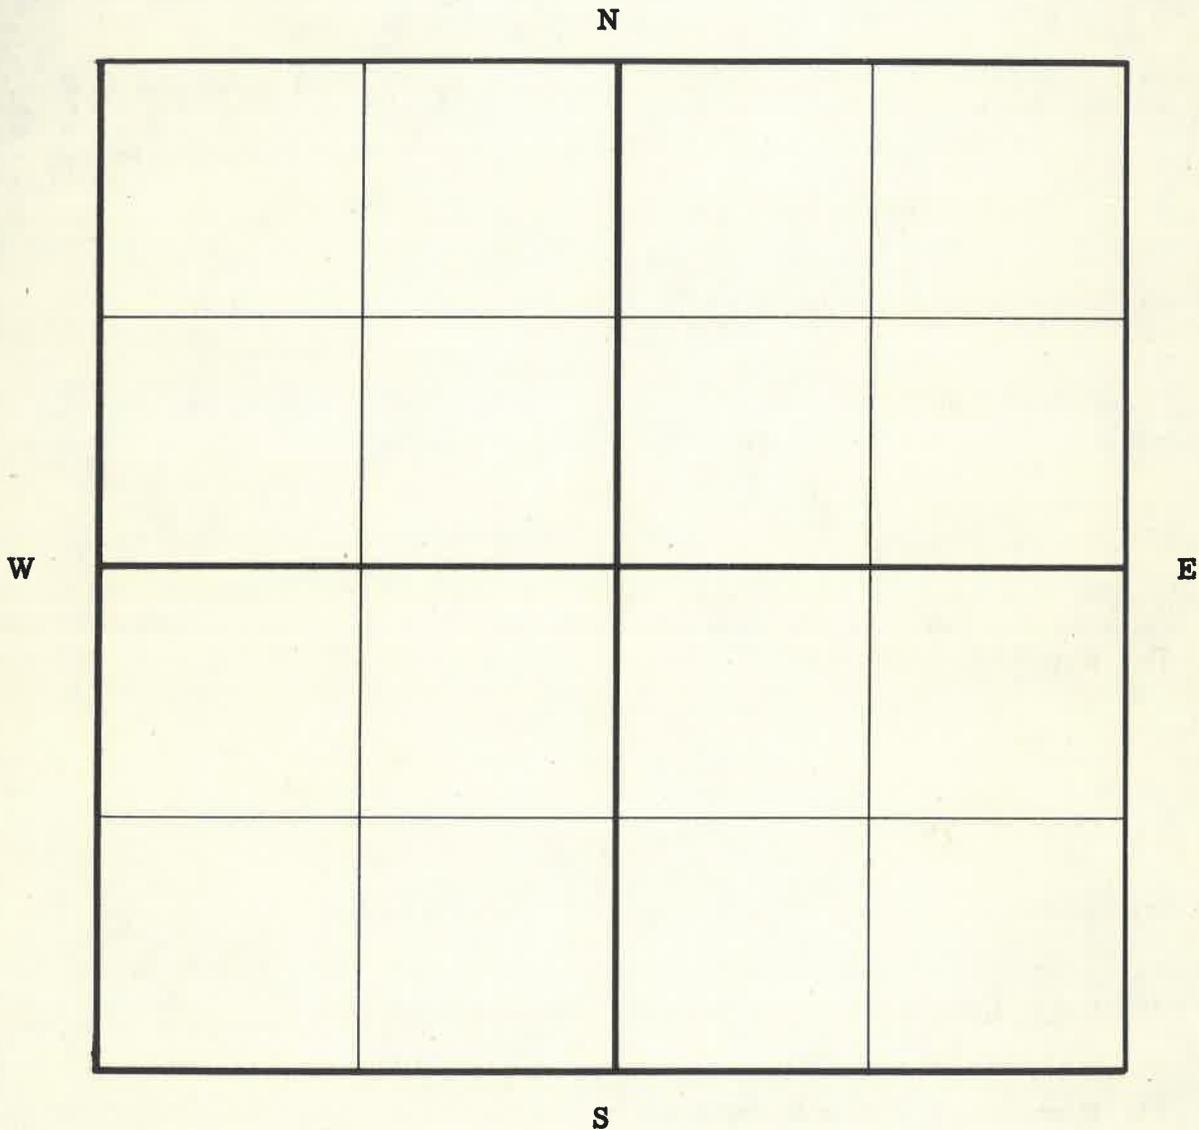

Address _____

ST. JOSEPH MUSEUM
19TH & FELIX STR.
ST. JOSEPH 23, MO.

Sketch map of location

Section _____ Township _____ Range _____

Indicate the chief topographical features, such as streams and elevations.
Also indicate houses and roads.

This diagram may be used for a whole section or for a quarter section.

If it is used for a section, each square will be 1320 feet on a side. If it is used for a quarter section, each square will be 330 feet on a side.

Note that in many cases the sections are somewhat larger than the normal size, as your map will show.

23. Tenant/Address of Property Nick Busker
24. Information current as of July 1994 date.

25. Site Description

Site is located on a slope in an upland pasture near the headwaters of a quite small stream. The southern portion of this tract of land, where the site is located is in trees. The horses have created a network of paths through the trees. The few lithic items shows up in the paths. The site is located east of a small pond. A small amount of regolithic chert is also present in the area.

15. Cultural Affiliation EuroAmerican farmstead and 20. Size of Site 214 meters (N-S)
Late Archaic (prehistoric) 212 meters (E-W)
21. approximately 32,000 m²/ha
22. Owner/Address of Property Pete Bellington, Box 100, Odessa, MO 64076
23. Tenant/Address of Property _____
24. Information current as of July 1994 date.

25. Site Description The Gillespie site is located on the east and north sides of an unnamed creek which in turn flows into Blue Branch. This stream is a part of the Sni-A-Bar Creek drainage. The site is located within two fields. The concentration of historic material is in the the center, northern portion of the south field. Most of the prehistoric material is found in the south field also. Where the historic material is concentrated, abundant limestone rock scattered by farming activities suggests the former location of a foundation.

There was a historic house at this location owned by R. Gillespie in 1877(see historic atlas).

Date July, 11, 1994

15 SWITZLER HALL - - - UNIVERSITY OF MISSOURI

COLUMBIA, MO 65211

28. Condition of Site

Site is located in a cattle pasture. Surface visibility was limited to areas where the cattle had grazed patches of grass close and to cow paths. About 50% of the site had a 15-25% visibility. While surface visibility would be considered poor, with careful and slow observations a relatively good examination of the site was made. Also shovel testing was done in this area.

24. Information current as of June 1994 date.

25. Site Description

Site is located on a stream terrace on the east side of an unnamed creek which in turn flows into Blue Branch. This stream is part of the Sni-A-Bar Creek drainage. The southern most edge of the site appears to have been removed as borrow many years ago as fill for bridge approaches on 40 highway just south of the site. The present geomorphology suggests the above. The main concentration of cultural material is at the southern part of the site. Also in that portion the historic material is found. One area of abundant pieces of limestone suggests that a historic foundation has been greatly disturbed by farming activities for many years. The prehistoric lithic scatter is quite light in the northern, middle, and eastern parts of the site.

There was a historic house at this location owned by W. A. Seymore shown on the historic atlas of 1877.

28. Condition of Site

Seymore Site (former Bellington Site)

Site has been under cultivation for many years. South edge of the site may have been destroyed for a borrow area to obtain soil for bridge approaches on 40 highway just south of the site. Currently the site is planted to beans which was 8 to 16 inches high at the time of this survey. Surface visibility was good. Approximately 2/3 of the cultural materials collected were found in the southern 1/4 of the site.

- - -

52. Drawings, photographs, and/or brief description and quantity of artifacts

A total of 115 artifacts were collected from the site. They are as follows: 71 unretouched flakes, 25 retouched flakes, 2 scrapers, 2 cores, 2 crude bifaces, one biface (ovate knife), projectile point fragment (probable Nebo Hill point), one piece of clear window glass, 4 sherds of stoneware, 5 sherds of earthenware, one large caliber bullet.

The chert collected was mostly Winterset. Winterset mass was 573.1 grams (98.12%) and the non-Winterset mass was 11.0 grams (1.89%).

24. Information current as of August 1994 date.

25. Site Description This site is located on an upland slope setting. It is east of the southern portion of (the now abandoned) east cell of the old Adams Dairy sewage lagoon. Probably the site once extended into the area where the lagoon was built many years ago. That portion would have been destroyed by the lagoon construction. The north half of the site is currently in a soy bean field and the southern part is in trees. Regalithic as well as cultural cherts (Winterstet) are found on the site. This site is west, northwest of site 23JA362 and is northeast of site 23JA361.

103 SWALLOW HALL

UNIVERSITY OF MISSOURI

COLUMBIA, MO 65211

28. Condition of Site

This site has been badly impacted by the construction, many years ago, of the former Adams Dairy sewage lagoon. This has destroyed the western part of the site. The eastern portion of the site is currently in soy beans (north part) and trees (south part). Cultivation and some erosion has affected the site. Vegetational cover made survey difficult.
