Ruth Frost # 38393 CBS. Sept 10-69
decubitus on buttocks area - heels -
Ultra Violet Lamp to buttocks and heels -

expired Oct 1-69 -

Stella Crawford (Medicaid)

Healed fx of right hip. Contractures of Right hamstrings x 45° from normal range. Left hamstring 35° from normal range. Hip flexors 10° from normal range. General body weakness able to use arms and feed herself. Could possibly start passive exercise and if patient cooperates we could make progress toward ambulation.

Nellie Crabill (Medicaid)

Healed fracture of right pelvis. Non united fx of left femur. Ankylosis of both knees. Lacking 10° for full extension. Patient stands well. Good use of her hands. Would not advise ambulation because of non-union of left femur. Can see no benefit from Physical Therapy.

Gladys Fischer Age No.

Osteoporosis and Osteoarthritis of left hand and wrist. Decubitus of both lower extremities noted. Severe tightness of hamstring, hip flexors and pelvic cords + adductors. Can see no benefit from physical Therapy.

Reason Treatment

Marie Turley
whirlpool treatment 1 X daily.

39263 Edwin Walker age 78 O.B.S.

78 year old white male of slender built. Able to walk with help. Patient is unable to communicate to follow instructions

Program will consist of full range of motion of all joints to prevent contractures. Whirlpool to left ankle provided X ray is negative. If X ray is negative gait training will be started with the final goal being independent ambulation.

24074 Oct. 17, 69

Olen Krugh,

a very cooperative patient. He is strong enough to ambulate well. However at the present time he has a fear of falling. It is very doubtful that he has ambulated much in the past few months. A mild active resistive exercise program will be started. Also he will be ambulated 2x daily in a walker. First with help and then hopefully he can ambulate unaided with either a walker with wheels or a stationary walker. I believe the patient has a desire to improve even at his age. (91 yrs)

James Terrell, CNI Oct. 22, '69

Left leg still has good strength. Patient moves leg very slowly through full range of motion. Full range of motion is obtained without pain. Patient walks with a partial stiff knee gait. Patient was instructed and encouraged to use a proper gait. Ordered a P.K. knee brace for his left knee to be worn at all times. Brace should be here in 10 days.
