CHARACTERISTICS

Options for ROV

DESCRIPTION

Operating ROVs with sensors fitted require the use of a PC computer. There are options between an inexpensive laptop that is not designed for harsh environments or expensive rugged laptops. Additionally, use of a laptop is not a seamless option. SeaBotix offers the Integrated Navigation Control Console (INC) that combines controls, powerful PC and sunlight readable monitor into one easy to use system.

Fully integrated control system

Designed to be simple, complete and rapid setup the INC is merely an open, connect and power on system. No longer a mess of cables between hubs, laptops and consoles. The INC is fitted with the control electronics, power supply interface and operator control unit (OCU). Just like the standard control console the OCU is removable for comfort and versatility.

Amazing true sunlight readable 21.5" monitor

In the lid is a 55cm (21.5in) wide screen transfective sunlight readable monitor. The image quality in direct sunlight is as good as if not better than indoors. Hard to believe, but seeing is believing. With the large screen size all data can be easily viewed on the single screen. No need for a laptop screen for data and monitor for video.

The monitor can be viewed in PC mode for sensors and video, picture in picture, split screen or full video. Simple fascia mounted keypad offers operator controls. There is an output for a second VGA monitor and/or a composite video output.
