

About  
**300**

Exciting and rare photographs of locomotives from the famed Abdill collection displayed for your enjoyment in beautifully printed, large 8 1/2 x 11 pages on high gloss enamel paper. Handsomely jacketed, sturdily bound. Features an opening section in lovely sepia duotone.

# Here is George Abdill to pilot you through the shadowy roundhouses of history A Locomotive Engineer's Album

*Saga of Steam Engines in America*

If ever a book was the "complete railroader" this is it. Any man who wants to check his own records and data of locomotives from the P-Mickey Ten Wheeler to the Vauclain 4-6-0 and back again through British imports and logging Shay's... let him take this book home and keep it under guard.

For in this album engineer Abdill takes the railroader on a run down main and branch lines that show the Iron Horse close-linked to the history and development of North America... from the Iron Colts of the 1830s to speed queens, freight hogs and humble switchers.

Photographs from many sources, most of them never before published, plus author Abdill's vast store of engine detail, tell the story as it has never been told. Included also are brief histories of some early railroads, sketches of obscure pikes with model portraits and engines spewing cinders and steam over mountain and flat land coast to coast.

So get aboard the CARROLL OF CARROLLTON (BAB\*), put yourself behind the throttle and let in the steam with a fervent plea — "Now do your duty, my beauty!" (\*Former Air Brakes)
