TREATMENT RECORD

Seiberling WEST FACADE, STAN HYWET SKETCH ICA 71/90

Owner: Stan Hywet Hall Foundation
 714 North Portage Path
 Akron, OH 44303

The painting was photographed to document condition.

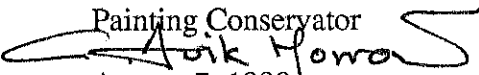

Tacking margins were relaxed with local application of moisture and heat.

Overall surface deformations were removed with a moist blotter under weight. The painting was mounted onto an ICA stretcher and secured with staples.

Because of the nature of the sketch and the probable handling of the piece by the artist it was decided to reduce the impact of the disfiguring grime along the top edge and leave remaining prints etc. as an integral part of the piece's history. The grime was reduced with local application of Scum-X, an eraser type cleaner (Dietzgen, Clough Industries).

Protective edge-strips were attached to the edges of the sketch for protection during handling. These can be set into a frame or removed for future purposes. An acid-free backing board was secured, documentation was completed and the painting was prepared for return to the owner.
