

Knitted worsted school sweaters, in all school colors, are manufactured by Lincoln Textiles, Inc., as are various other types of wearing apparel.

For the past year a separate division has been engaged in the manufacture of custom made patented boat covers, from a material recently developed. This is one of the post war wonder fabrics, extremely strong and durable, yet light in weight.

This material is also being currently used by Lincoln Textiles in the making of tarpaulins for motor freight common carriers and has received wide acceptance because of its exceptional qualities.

Though having but 15% of the weight of heavy canvas used for tarpaulins for many years, this new fabric is taking over as it is admirably suited for the job because of this lightness combined with strength and durability. In addition to being highly water repellent, this fabric is treated with a secret formula which makes it impervious to mildew and fungus deterioration.

Owing to the general situation in the wearing apparel field, Lincoln Textiles has been operating with reduced personnel for the past several months, but it is expected the new products will gradually bring an increase in employment to at least former levels.
