

Seeger's Dairy expands, becomes more automated

Since the approval of a grant from the City of Merrill's Economic Development Fund, Seeger's Dairy has purchased new equipment in the amount of \$60,000 and is currently meeting the demand of milk supply needs. With the new equipment, the dairy is producing 100,000 gallons of milk a week, nearly double the production prior to automation.

Bob Mutz of Seeger's Dairy says, "We needed to speed up the process and become more automated to meet the consumer's needs. The machines are in and rolling. It has been a good step for the business and we are able to keep up with the increasing demand."

The new equipment and expansion will create a minimum of five new jobs at the dairy, according to Mutz. FN
