My dear Doctor Hinton:

We were very much interested in the findings by the Hinton test in the case of Mr. William B. Cowen. Mr. Cowen presents an atypical picture of memory loss which we at first thought might be due to arteriosclerosis or a pre-senile change.

We are referring Mr. Cowen back to Boston to be under the care of either Doctor Frank Fremont-Smith or Doctor Donald J. MacPherson. Of course, we expect that a lumbar puncture will be done. I am sure that you will get a specimen of cerebral spinal fluid in the course of the next few days either from the Massachusetts General Hospital or the Peter Bent Brigham.

Very truly yours,

Charles H. Kimberly
