Dear Doctor Hinton:

I wonder if you would give me any possible information about laboratory tests helpful in diagnosing an echinococcus infestation including complement fixation tests.

We have a patient at present who has traveled a great deal throughout the world and who at present is suffering from a condition which we believe might be due to an echinococcus cyst of the lungs.

We would be glad to send on serum for any tests that you suggest if you will advise us of the amount required and how it should be prepared, if any special preparation is needed.

Very truly yours,

Charles H. Kimberly
