

To Stone Masons and Contractors.

THE Subscriber will receive Proposals un-
til the 1st of December next, for the con-
struction of a Dike and Pier on a shoal at the
north end of Goat Island, in this harbor.

THE DIKE, founded in an average depth
of six feet at low water, will be about 1300 feet
in length; about ten feet broad under water;
8 1-2 feet broad above water, and nine feet three
inches high above low water. The part under
low water will be constructed of granite stones
10 1-2 feet long, 1 1-2 feet high, and at least
1 1-2 feet broad, laid in open work, and filled in
with refuse stones and gravel. The part above
low water will be faced with granite in courses,
having a due proportion of headers, and backed
with good rubble work. The top course will
consist entirely of headers, 7 feet long, and not
less than 1 1-2 feet rise, and 1 1-2 feet width.

THE PIER, standing on the outer end of
the Dike in a mean depth, at low water of
nearly 13 feet, will be 50 feet square. Two of
its walls will be 10 foot thick under low water,
and two, 8 feet thick--these walls being formed
of large granite stones laid in open work, and
filled in with refuse stones and gravel. Above
water, these walls will be faced on one side,
with granite, in courses, backed by good rubble
work, the thickness being reduced, by a slight
rake in front, and by offsets in the rear to 7
feet at the top. The top course of these pier
walls will be composed of stones not less than
1 1-2 feet thick, 5 feet long and 3 feet broad,--
all laid in headers. The space enclosed by the
pier walls will be filled, first with refuse stones
to the height of low water, and then with as
much gravel as may be required to fill all the
interstices. Open a part of this surface a strong
grillage will be laid of the size necessary for the
foundation of a Light House; upon the grillage
a mass 7 feet high, of dry rubble masonry will
be laid, and thereon a mass of rubble masonry

in mortar, 3 feet high. The space around the foundation will be filled first with refuse stones carefully packed, and then with gravel. The top of the pier (about 10 feet above low water,) will be formed by a pavement of large granite stones.

For further particulars, and an inspection of the plans, personal application must be made to the Subscriber, at Fort Adams.

The proposals may embrace the supply of all the materials, and the execution of all the work; or separate proposals may be made for the supply of the granite; for the delivery of the filling in stone and gravel; for the execution of the work under water, including or not including the materials; and for the execution of the work above water including or not, the materials.

The Pier and Dike to be completed by the 30th of September 1838.

With the proposals satisfactory evidence must be produced of the ability to comply with the terms herein proposed, and to secure the execution of a contract by responsible sureties.

GEO. W. CULLUM,

Lieut. U. S. Eng'ts.

Newport Oct. 15 1836.

To The publishers of the Herald of the Times, Rhode-Island Republican, the Providence papers Fall-River Monitor, Warren R. I. Star, Boston Patriot Commercial Gazette, and Courier, will please give the above four insertions, and forward their accounts.
