

TA-4J: gives student Naval Aviators their sea-legs.

The new TA-4J advanced trainer is part of the famous A-4 Skyhawk family of attack aircraft. Combat-tough. Reliable. Built to take the rigors of carrier operations, and qualified for student carrier landings. □ It's an easy-flying, sure-footed teacher for student Naval Aviators. Wing-lift spoilers help take the surprises out of cross-wind landings. A steerable nose wheel simplifies ground maneuvering. Performance and handling are identical to fleet aircraft. And for added safety, its ejection seats are the same Escapac system used on first-line Skyhawks. □

The new TA-4J. It's the shortest route from flight training to carrier deck.
