

INSTRUCTIONS

TV-R7000

TV RECEIVE ADAPTER

INTRODUCTION

Thank you for choosing this ICOM product.

The **TV-R7000** is a television receive adapter for use with an IC-R7000 COMMUNICATIONS RECEIVER. The **TV-R7000** converts TV signals received by the IC-R7000 to video signals, displaying pictures on the CRT display.

For best results, please read these instructions before using the adapter, and keep them handy for future reference.

INSTALLATION

●UNPACKING

TV-R7000 and Accessories included.

	Qty.
1. Video cable	1
2. Installation screws . .	2
3. Washers.	2

●UNIT INSTALLATION

Install the TV-R7000 on the side of the IC-R7000 receiver in the following way:

1. Remove the two screws indicated in Fig. 1 from the rear panel of the TV-R7000. Slide and pull the unit's cover out as shown in Fig. 1.

Fig. 1

2. Attach the TV-R7000 cover to the side of the IC-R7000 using the two supplied screws. Refer to Fig. 2.

Fig. 2

3. After installing the TV-R7000 cover on the IC-R7000, attach the TV-R7000 unit to the cover using the two previously removed screws.

Fig. 3

INTERCONNECTION

1. Connect the TV-R7000 IF IN plug to the [10.7MHz IF OUTPUT] terminal on the IC-R7000.

2. Connect the supplied video cable between the [VIDEO OUTPUT] terminal on the TV-R7000 and a video input terminal on the monitor CRT display or TV set.
3. Connect the supplied video cable between the [AUDIO OUTPUT] terminal on the TV-R7000 to the monitor CRT display or TV set, if needed.

4. If a speaker is connected to the [AUDIO OUTPUT] terminal through an appropriate amplifier, sound will be emitted from the external speaker.

NOTE: The output level should be approximately 0.3Vrms at 1kHz with 47kΩ load. Impedance of an amplifier connected to the [AUDIO OUTPUT] terminal on the TV-R7000 should be at least 10kΩ.

OPERATING INSTRUCTIONS

1. Connect a suitable TV antenna. The IC-R7000 antenna connector impedance is 50Ω, and a suitable match can be made with a 75Ω feedline.

Align it in the proper direction along the plane of polarization to ensure receiving clear pictures.

2. Turn ON the power switches on the IC-R7000 and TV-R7000.
3. Push the [FM] MODE SELECT SWITCH and slide the FM SELECTOR SWITCH to the [FM(2)] position on the IC-R7000 for setting the FM-wide (150kHz) mode.

The FM SELECTOR SWITCH is located on the rear panel.

4. Tune the dial to the aural center frequency of the TV signal and not to the picture carrier frequency.
5. Adjust the [AF GAIN] CONTROL on the IC-R7000 to a comfortable listening level. Sound is emitted from the internal speaker. If an external speaker is connected through an appropriate audio amplifier, sound will be emitted from that speaker as well.

ICOM INCORPORATED

1-6-19, KAMIKURATSUKURI, HIRANO-KU,
OSAKA 547, JAPAN

SPECIFICATIONS

Video carrier input frequency	: 15.2MHz (U.S.A.) 16.2MHz (EUR./AUS.)
Audio carrier input frequency	: 10.7MHz
Audio intermediate frequency	: 4.5MHz (U.S.A.) 5.5MHz (EUR./AUS.)
Video output level	: 1Vp-p (75Ω)
Audio output level	: 0.3Vrms with 47kΩ load
Power supply requirements	: 9V negative ground
Current drain	: 80mA approx. (When no signal is received)
Dimensions	: 35(35)mm(W) x 110(110)mm(H) x 200(214)mm(D) Bracketed values include projections.
Weight	: 620g
