

NEED CRYSTALS?

We can supply crystals from 2 KHz to 80 MHz in many types of holders.

SPECIALS

Color TV crystal (3579, 545 KHz) wire leads	\$1.60 4 for 5.00
100 KHz frequency standard crystal (HC 13/U)	4.50
1000 KHz frequency standard (HC 6/U)	4.50
Any CB crystal, trans. or rec. (except synthesizer crystals)	2.50
Any amateur band crystal in FT-243 holders (except 80-160 meters)	1.50 4 for 5.00
80 meter crystals in FT-243 holders	2.50

We have in stock over six million crystals which include types CR1A/AR, FT243, FT241, MC7, HC6/U, HC13/U, etc. Send 10¢ for our 1971 catalog with oscillator circuits, listing thousands of frequencies in stock for immediate delivery. (Add 10¢ per crystal to above prices for shipment 1st class mail; 15¢ each for air mail.)

73 Tests the Gonset Super Scan Receiver

and blows its mind!

Eight channels! That's right this receiver listens to eight two meter FM channels almost simultaneously. Someday every transceiver will have to come to this type of receiver. . . it's *that* good. Once you get used to listening to every repeater and simplex channel that is in use in your area — and you get used to this almost as soon as you turn on the scanning receiver — you are marked.

The Super Scan has a digital readout so you can see which channel you are listening to. There are eight small switches on the back of the receiver which enable you to turn off or on the channels being scanned. This is handy when, say, 94 is

The front of the Gonset Super-Scan. Simple, modern, and functional layout is carried throughout the rig.

busy and you want to keep an ear peeled to the other channels. By switching off the 146.94 MHz position, the receiver will scan all but that channel.

The automatic scanner searches the eight channels in a little over a half a second, so not much gets by you. There is a front panel switch so you can turn off the scanner feature and switch channels manually.

Also on the front panel are the usual squelch and volume control. The power on-off switch is a push button instead of the volume control switch. This is nice because you don't have to turn off the squelch and check the volume every time you turn the receiver on.

The receiver is powered from either 12V dc or 115V ac, which is a very handy feature. The change is made just by switching power cords. Powering twelve-volt equipment can be a misery when you want to use it in the ham shack. Not many of us have an extra twelve-volt power supply that is quiet enough to run transistor equipment. One of these days we may build a power supply to run mobile equipment, but in the meantime we get by with a small wet battery (robbed from a Heath Boonie Bike) and a battery charger to keep it alive.

One very nice feature of the Gonset Super Scan is that it is shielded well enough to operate even with nearby transmitters perking. Some of the other scanning receivers just collapse when a transmitter is turned on in the vicinity. This has been annoying at hamfests and conventions where it is particularly nice to be able to listen to as many different channels as possible. Solid state receivers like this are particularly sensitive to strong rf, so Gonset has done a much better than average job of designing in this receiver.

There is a small speaker built into the receiver plus a jack in the back for a remote speaker if something more substantial is desired.

Mobile mounting hardware is included with the unit. This is just the thing to add to the car for the ham that has almost everything and wants to make it everything.

JEFF-TRONICS

TEST EQUIPMENT SPECIALS

H-P 524-B Counter, 10 cps to 10 Mc. Exc. cond. with cabinet \$300.00
H-P 524-D Counter, with 526-B Time interval Plug-in and 525-A Freq. Converter, 10 cps-100 Mc. Exc. Cond. \$500.00
Other plug-ins can be obtained to count to 500 Mc.
BECKMAN 8361-RW Preset EPUT & Counter to 1 Mc. With manual. Rack mount. Exc. cond. \$200.00
TEKTRONIX PLUG-INS \$50.00 each.
