Stern handles	Aluminum gunwale	

COLORS: Seaspray Green. Burgundy. Midnight Blue.

## AERO-CRAFT'S TIME PROVEN, EXCLUSIVE STA-FOIL® DESIGN

Aero-Craft scored a smashing advance in aluminum canoe design. The most revolutionary new concept in canoe design since Hiawatha. The STA-FOIL® is a rib pressed into the side of the canoe during stretch forming operations. This STA-FOIL® adds tremendous strength and rigidity to both the side and bottom of the canoe.

Located just above the normal waterline, it has a definite sponson effect when the canoe is tipped in either direction, thus substantially increasing stability. The STA-FOIL® also decreases the amount of draft on the canoe which results in easier paddling and a pronounced increase in speed.

### HIGHLIGHTS OF AERO-CRAFT CANOES

- Heat treated aircraft aluminum.
- Heavier and stronger stem pieces, keels and gunwales.
- Additional cross members for added strength and greater rigidity.
- Expanded polystyrene flotation foam in excess of B.I.A. standards.
- Velon web seats for comfort, lower center of gravity and extreme strength.
- Brazier head rivets with over twice the holding power of counter sunk rivets.
- 5/32nd diameter rivets that are 50% stronger than 1/8th rivets. (see table at right)

Load, in pounds, required to produce failure of one rivet in single shear		
1/8" rivet - 61 S-T6	Used in other makes	389 lbs.
5/32" rivet - 61 S-T6	Used in Aero-Craft	596 lbs.
This table proves conclusively that 5/32" rivets have over 50% more strength than 1/8" rivets.		

### C-13 Aluminum

Leading off the famous Aero-Craft canoe line is the model C-13. Handling and portaging come easy with this rugged new model that is ideal for fishing or hunting those inaccessible waters. Light, strong and durable with Aero-Craft quality throughout. Exclusive STA-FOIL® design.
